# School Of Mathematics & Statistics Dual Honours Degrees

## Faculty of Social Sciences

**BA Accounting & Financial Management and Mathematics**
**BSc Economics and Mathematics**
**BA Business Management and Mathematics**

## Faculty of Arts and Humanities

**BSc Mathematics and Philosophy**

## Faculty of Engineering

**BSc Computer Science and Mathematics**
**MComp Computer Science with Mathematics**

# Level Three and Level Four Mathematics and Statistics Courses

**2018/2019 and 2019/2020**

# Contents

# 1 Introduction

This handbook provides information of a general nature, and also information about course structures and individual modules, for students who expect to enter, in September 2018, the third or fourth years of one of the following dual degree programmes that involve the School of Mathematics and Statistics (SoMaS):

- the three-year BA Accounting & Financial Management and Mathematics programme;
- the three-year BSc Computer Science and Mathematics programme;
- the four-year MComp Computer Science with Mathematics programme;
- the three-year BSc Economics and Mathematics programme;
- the three-year BA Business Management and Mathematics programme;
- the three-year BSc Mathematics and Philosophy programme;

This booklet contains essential information to help you to make informed choices; it will be useful throughout your third (and fourth) year. You are welcome to seek further information or advice from your SoMaS Personal Tutor, the Senior Tutor, the Director of Teaching, or the SoMaS Programme Leader for your degree programme.

Prof. Neil Dummigan, Director of Teaching, SoMaS

## 2 Disclaimer

**Every care has been taken to ensure the accuracy of the information in this booklet. To the best of our knowledge it was correct at the time at which it was prepared. The School of Mathematics and Statistics cannot accept responsibility for any errors which could occur should there be any further modification of the Regulations.**

**There have been a number of staff changes in the School in recent years with several new lecturers arriving and some older staff leaving. Further changes of this kind may well occur. Courses at Levels 3 and 4 are specialized and the School cannot guarantee to run a course for which the qualified lecturer leaves. On the other hand additional options may be offered when staff with new interests arrive. Also, there could be changes in the syllabus and timing, particularly of courses in 2019–2020.**

**In addition the School reserves the right to withdraw courses for which the number of students registered is very low.**

# 3 Administrative Information

## Dates of Semesters

### Session 2018–2019

| | |
|---|---|
| 2018 | |
| 24 September – 15 December | Autumn Semester Teaching Period (12 weeks) |
| | |
| 2019 | |
| 14 January – 2 February | Autumn Semester Examinations (3 weeks) |
| 4 February – 6 April | Spring Semester, First Teaching Period (9 weeks) |
| 29 April – 18 May | Spring Semester, Second Teaching Period (3 weeks) |
| 20 May – 8 June | Spring Semester Examinations (3 weeks). |

## Organisation of Modules

Most Level 3 and 4 Mathematics and Statistics modules are delivered at the rate of **2 hours of lectures per week**. Your lecturers will make appropriate arrangements for times when you can consult them.

## Choice of Modules

Under the modular system all undergraduates must register each year for courses totalling *120 credits*. If you are registered for a dual degree programme then in your third year you will normally take (about) 60 credits from each department contributing to the programme, but you should check the Regulations for the programme.

You should make your choice of modules after you have received guidance from the SoMaS Programme Leader for your degree programme, and from the other partner department.

Online module choice in 2018 runs from 30 April – 18 May. You should ensure that you submit your choice of modules during this period. Details of the operation of online module choice can be found at http://www.sheffield.ac.uk/registration/continuing/module.

## Unrestricted Modules

The term unrestricted means you are free to choose either a mathematics or a statistics module or one outside the School of Mathematics and Statistics. The marks from such modules are used in assessing your final degree classification.

It is your responsibility to determine the prerequisites and timetable for any non- mathematical module and to obtain academic approval from the department which owns the module. The timetable for 2017–2018 is the best available guide, but this is subject to change for 2018–2019, and choices may need to be changed when the final timetable for 2018–2019 is known in September.

Note that some mathematics and statistics modules cannot be taken with certain modules from other departments; details are included in the information on individual modules.

You may not generally choose Level 1 modules as unrestricted modules at Levels 2, 3 or 4; as an exception, modules from the Modern Languages Teaching Centre (MLTC) may be permitted. You are also advised that the School will not permit its students to take any mathematics module from another University department as an unrestricted module at Level 2, 3 or 4.

### Change of Choice of Modules

The University allows you to change your choice of modules in the first three weeks of any semester. *If you do change your options early in a semester it is your responsibility to ensure not only that your timetable for that semester works but also that you will have suitable options available in future semesters for you to be able to complete your degree* (for example, you will have covered all prerequisites for your future choices). Change of choice of modules is done online.

The system can be accessed via MUSE. Log in as normal and go to the My Services tab then Module Add/Drop for the link to the online system. Follow the simple instructions on screen. Your core modules will already be listed when you access the online add/drop screens. Once you have entered and submitted your request to add and drop optional modules, your department will check and approve, or decline, your choices. You will receive an automated email, confirming when your record has been updated. If there are any problems with your choices, you will receive an email from your department advising you what action to take.

The online system is not available to distance learning students or to students taking modules in the Institute of Lifelong Learning. They will need to use the paper 'Add-Drop' form. Add-Drop forms are available from the Student Services Information Desk (SSiD) in the Union of Students, and can also be downloaded from the SSiD web site at https://www.sheffield.ac.uk/ssid/forms. When you have completed the form, you must have it signed, to signify the School's approval, by the Programme Leader for your degree programme – see the "Making changes" section of https://sheffield.ac.uk/maths/current/admin. The form should then be handed in at Hicks F10.

You can access the record of your choice of modules on central records. You must check that this record is correct in the fourth week of each semester. If it is not you will need to make the appropriate changes online or using an Add-Drop form.

### Progression into the Third Year

Since your Level 2 results contribute to your overall degree classification (unlike your Level 1 results), the rules for progression from Level 2 into Level 3 are slightly more involved.

For students on **BSc** or **BA** degree programmes, the rules for progression from Level 2 to Level 3 are given below, and apply to the January and June exams taken together:

(i) You may progress to Level 3 without any resit if you have obtained 120 credits in your Level 2 modules.

(ii) The Examiners have discretion to decide whether students who have been awarded 100 or 110 such credits may be deemed to have passed at Level 2 and permitted to proceed to Level 3. Permission to proceed in these circumstances is *NOT* automatic.

If you have obtained at least 100 credits but have failed one or two modules at Level 2, then you are *strongly advised to resit* any failed modules (even if the Examiners permit you to progress) as a pass would give you more flexibility in your third year, because in all cases there is a minimum number of credits that must be obtained (over the second and subsequent years combined) if the degree is to be awarded.

(iii) If you have only *90 or fewer credits* then you must resit *ALL* the modules you have failed.

Note that for any Level 2 module you are only allowed ONE resit attempt (not including cases for which you are 'Not Assessed'). If you are unable to pass Level 2 after the maximum number of attempts at each module, you will not be able to continue with your degree.

If you wish to retake failed modules you should follow the instructions at http://www.sheffield.ac.uk/ssid/exams/reassessment. Any international student who wishes to take August 2019 resit examinations in their home country should apply to do so by the end of the Semester 2 examination period 2019. Further details can be found at http://www.sheffield.ac.uk/ssid/exams/exabrinf.

*The maximum score that can be credited as a result of a resit examination is 40.*

Students on an MComp programme must obtain 120 credits at Level 2 with an average of at least 54.5 to be permitted to progress to Level 3 of the same programme; those who do not meet this requirement may be able to transfer to a BSc programme.

### Progression into the Fourth Year

The Examiners may in their discretion recommend that a student on an MComp programme who is awarded not fewer than 100 credits at Level 3 and who obtains a weighted mean grade of not lower than 49.5 at Level 3 be permitted to proceed to Level 4.

This is *not* automatic, and students towards the bottom end of this region, or students with any fail marks, should *not* expect to be permitted to progress; experience has shown that such students struggle with the additional difficulty of Level 4. If students are not permitted to progress, then students may be eligible for a BSc degree.

A student who is permitted to progress from Level 3 to Level 4, with fewer than 120 credits from the Level 3 year, may resit failed Level 3 modules once during the Level 4 year. The resit mark will be capped at 40 for modules with a 3** code, and at 50 for modules with a 4** code. If the resit mark is lower than the original, the higher mark will be used in the final assessment.

### Incorporating Employment into your Degree

The University of Sheffield recognises that both students and employers value the benefits that structured work experience can provide as part of a university degree programme. We have two options for incorporating a year in employment into your degree:

(i) If you began your degree in Autumn 2018 or later, you may be able to transfer to one of our four "with Placement Year" programmes. In principle, this can be done at any point prior to your final year, subject to agreement by SoMaS. If you are in your penultimate year, you may need to find a placement before being allowed to transfer. These programmes incorporate extra support for finding a placement and developing employability skills, beyond those available to other undergraduates.

(ii) If you find a placement during your penultimate year, you can add "with Employment Experience" to any of our (non-Placement Year) programmes, subject to successful completion of the placement. This requires transferring degree programmes, which needs to be approved by SoMaS (and any other appropriate departments, for dual degrees).

Under either scheme, you will spend your penultimate year (i.e. the year between Levels 2 and 3 of a three year degree, or between Levels 3 and 4 of a four year degree) in employment. Students typically return from their placement year confident and highly-motivated, often with a graduate job lined up for after their degree.

The placement should involve work connected with your degree programme or with your proposed future employment. We recognize that many mathematics graduates go into graduate jobs that do not use their degree directly. Therefore a placement with, for example, an accountancy firm would be acceptable even if it did not involve the use of university-level mathematics. Students need to find their own company placement and the SoMaS Employability Lead needs to validate the placement. Mathematics students are very much in demand for year-long placements, and many companies with interesting jobs for mathematicians are willing to invest the training effort in year-long placements.

You will typically need to start planning for the placement a year before it starts. You are responsible for getting the placement, but the Careers Service can assist. Those on the Placement Year programme will also have help on offer from the Placement Year Programme Lead.

Your placement will be assessed on a pass or fail basis. It will not count towards your final degree classification; however, you will need to pass a formal assessment and complete the placement year in order to gain the amended degree title. You will be required to complete and submit:

- A skills analysis (1600-2000 words), identifying specific skills that you have gained and/or developed over the course of your placement,
- A reflection summary (600 words) summarising what you have achieved over the year and lessons you have learned for the future.

For further details, see http://www.sheffield.ac.uk/placements/students/year.

### Avoiding Collusion and Plagiarism

This has been extracted from the University's *Guidance for Students on the Use of Unfair Means*, available from the SSiD web page at http://www.sheffield.ac.uk/ssid/exams/plagiarism.

The University expects its graduates to have acquired certain attributes. Many of these relate to good academic practice.

Throughout your programme of studies at the University you will learn how to develop these skills and attributes. Your assessed work is the main way in which you demonstrate that you have acquired and can apply them. Using unfair means in the assessment process is dishonest and also means that you cannot demonstrate that you have acquired these essential academic skills and attributes.

#### What constitutes unfair means?

The basic principle underlying the preparation of any piece of academic work is that the work submitted must be your own work. **Plagiarism, submitting bought or commissioned work, double submission (or self plagiarism), collusion** and **fabrication of results** are not allowed because they violate this principle (see definitions below). Rules about these forms of cheating apply to all assessed and non-assessed work.

(i) **Plagiarism (either intentional or unintentional)** is using the ideas or work of another person (including experts and fellow or former students) and submitting them as your own. It is considered dishonest and unprofessional. Plagiarism may take the form of cutting and pasting, taking or closely paraphrasing ideas, passages, sections, sentences, paragraphs, drawings, graphs and other graphical material from books, articles, internet sites or any other source and submitting them for assessment without appropriate acknowledgement.

(ii) **Submitting bought or commissioned work** (for example from internet sites, essay "banks" or "mills") is an extremely serious form of plagiarism. This may take the form of buying or commissioning either the whole piece of work or part of it and implies a clear intention to deceive the examiners. The University also takes an extremely serious view of any student who sells, offers to sell or passes on their own assessed work to other students

(iii) **Double submission (or self plagiarism)** is resubmitting previously submitted work on one or more occasions (without proper acknowledgement). This may take the form of copying either the whole piece of work or part of it. Normally credit will already have been given for this work.

(iv) **Collusion** is where two or more people work together to produce a piece of work, all or part of which is then submitted by each of them as their own individual work. This includes passing on work in any format to another student. Collusion does not occur where students involved in group work are encouraged to work together to produce a single piece of work as part of the assessment process.

(v) **Fabrication** is submitting work (for example, practical or laboratory work) any part of which is untrue, made up, falsified or fabricated in any way. This is regarded as fraudulent and dishonest.

#### How can I avoid the use of unfair means?

To avoid using unfair means, any work submitted must be your own and must not include the work of any other person, unless it is properly acknowledged and referenced.

As part of your programme of studies you will learn how to reference sources appropriately in order to avoid plagiarism. This is an essential skill that you will need throughout your University career and beyond. You should follow any guidance on the preparation of assessed work given by the academic department setting the assignment.

You are required to **declare that all work submitted is entirely your own work**. Many departments will ask you to attach a declaration form to all pieces of submitted work (including work submitted online). Your department will inform you how to do this.

If you have any concerns about appropriate academic practices or if you are experiencing any personal difficulties which are affecting your work, you should consult your personal tutor, supervisor or other member of staff involved.

The following websites provide additional information on referencing appropriately and avoiding unfair means:

The **Library** provides online information literacy skills help https://www.sheffield.ac.uk/library/idlt

The **Library** also has information on reference management software http://www.shef.ac.uk/library/refmant/refmant.html

The **English Language Teaching Centre** operates a **Writing Advisory Service** through which students can make individual appointments to discuss a piece of writing. This is available for all students, both native and non-native speakers of English. http://www.shef.ac.uk/eltc/languagesupport/writingadvisory/index

#### What happens if I use unfair means?

Any form of unfair means is treated as a serious academic offence and action may be taken under the Discipline Regulations. For a student registered on a professionally accredited programme of study, action may also be taken under the Fitness to Practise Regulations. Where unfair means is found to have been used, the University may impose penalties ranging from awarding no grade for the piece of work or failure in a PhD examination through to expulsion from the University in extremely serious cases.

#### Detection of Unfair Means

The University subscribes to a national plagiarism detection service which helps academic staff identify the original source of material submitted by students. This means that academic staff have access to specialist software that searches a database of reference material gathered from professional publications, student essay websites and other work submitted by students. It is also a resource which can help tutors and supervisors to advise students on ways of improving their referencing techniques. Your work is likely to be submitted to this service.

For further information, see https://www.sheffield.ac.uk/ssid/complaints-and-appeals.

### Failure to Comply with Assessment Requirements

Failure to attend an examination without adequate reason will result in a grade of 0 being awarded. If you have good reason to miss an exam due to circumstances beyond your control, you need to fill in an Extenuating Circumstances Form: http://www.sheffield.ac.uk/ssid/forms/circs. If the circumstances are medical and you are registered with the University Health Service (UHS), note what it says about filling in the electronic (or mobile app) version of the form and submitting it for UHS to add the documentation, and also that the doctor needs to have seen you while you are ill. (See the explanatory notes for this and more.) In all other cases, please take the completed form and any other supporting documentation to SoMaS Reception in F10 as soon as you reasonably can. If you become ill during an exam, please tell an invigilator.

Excuses such as misreading the timetable or oversleeping are **not** acceptable as reasons for absence, but any student who misses an exam for such a reason should report to SoMaS Reception in F10 as soon as possible.

All unauthorized material (such as revision notes, books, etc) must be left outside the examination hall. This includes notes on scraps of paper. Students should ensure that their pockets are empty of such notes before entering the examination room. Students must also ensure that there are no written notes on their hands when they enter the examination hall and must not write on their hands during an examination. For further details of examination procedures, students should consult the regulations on examinations: http://calendar.dept.shef.ac.uk/calendar/06f_gen_regs_as_to_exams.pdf

It is recommended that any student with personal circumstances continuing from the previous semester submits a new Extenuating Circumstances Form, to keep us up-to-date and to ensure that their case is not overlooked. Any student with a disability or chronic medical condition, for whom the Disability and Dyslexia Support Service has produced a learning support plan, need not keep filling in forms to inform us of their condition. In fact, disabilities and chronic medical conditions are not normally regarded as extenuating circumstances, the emphasis being on providing support to help students to do the best they can. However, it may be appropriate to submit an Extenuating Circumstances Form if there is a particular flare-up or complication at a time affecting exams.

Failure to hand in assessed coursework on time without good reason will result in the imposition of a penalty in accordance with the University's Penalties Policy. Late submission of a major piece of assessed coursework, such as a project dissertation, will result in the deduction of 5% of the total mark awarded for each of the first 5 'University Working Days' by which the submission is late; work submitted even later than that will receive a mark of 0. For pieces of assessed coursework that contribute only a small percentage of the overall assessment, the Faculty of Science has given the School approval to operate a policy of 'zero tolerance', under which any late submission receives a mark of 0.

Module leaders have the power to award dispensations in cases where the lateness was caused by certifiable medical problems or severe personal circumstances; requests for such dispensations should be made as soon as the problem is known, in writing or by e-mail to the module leader; students making such requests must also complete an 'Extenuating Circumstances Form' and hand it in at SoMaS Reception (F10).

**Statement on Assessment Criteria**

Typical examinations in SoMaS involve several questions, each of which will have components of at least some of the following types: (i) explanation of theory developed in the module; (ii) standard problems solvable using methods seen in the module; (iii) more difficult unseen problems requiring knowledge of the module but also requiring some original thought. Students' scripts are assessed using a strict and detailed marking scheme, usually based on method and accuracy marks. The primary criterion is correctness, whether it be of calculation, method or explanation.

This produces a set of 'raw marks' which is then scaled, using the judgement of the examiner, to the University's 100-point reporting scale, which corresponds to degree classifications using the following rule:

| | | |
|---|---|---|
| 70–100 | : | Class I |
| 60–69 | : | Class II(i) |
| 50–59 | : | Class II(ii) |
| 45–49 | : | Class III |
| 40–44 | : | Pass. |

If an examiner feels that a mark of 30% on the exam is deserving of a pass, then 30% will be scaled to 40 on the University's scale; there are similar points at each of the classification boundaries. The scaling is subjected to a central School scrutiny process involving the past record of each student who is registered for the module and for whom there are no abnormal circumstances.

Examination papers, including the past papers to which the students have access in advance, carry the distribution of marks between parts of questions.

The internal checker for each examination paper and the appropriate External Examiner are provided with copies of the module's objectives/learning outcomes, and these are also distributed to students.

The School operates a scheme whereby marking is checked for accuracy. In addition, on each paper at Level 2 and above selected scripts, usually from the border bands between classifications, are sent to the appropriate External Examiner. Before the Final Year Examination Board Meeting, the External Examiners have the opportunity to look at all final year scripts, and generally look at those of candidates that are very close to borderlines, as well as other special cases.

All examination marking and all discussion at formal Examination Board Meetings is conducted anonymously, that is, students are identified only by their registration numbers.

Students have the right to see their examination scripts after they are marked; this generally takes place around Week 3 of Semester 1 (for the previous session's June exams) and Week 6 of Semester 2 (for the January exams).

## Award of Degrees

In order to qualify for the award of a degree, students have to obtain a specified number of credits. Also, the 'level' of the credits is important. In what follows, 'Level 3 modules' refers to courses MAS3** (and courses of a similar level in other departments), normally taken during Level 3, and 'Level 4 modules' refers to courses MAS4** (and courses of a similar level in other departments), normally taken during Level 4. The pass mark for Level 3 modules is 40, and the pass mark for Level 4 modules is 50.

In order to be awarded an **honours degree of BA or BSc**, you must obtain at least *200 credits*, of which at least *90 must be of Level 3 modules*, out of the overall *240 credits* possible on the second and third years combined.

This is a minimum requirement below which you cannot obtain an honours degree: the granting of a pass degree (that is, without honours) to a student with fewer than 200 credits (or with fewer than 90 credits at Level 3 modules) is always at the discretion of the examiners, and requires the specific concurrence of the External Examiners. A minimum of 180 credits is required for this.

Candidates for a BA or BSc degree who have completed, and submitted themselves for assessment on, 120 credits at each of Levels 2 and 3 but have not been recommended for the award of a degree may enter for a subsequent examination for each failed module on one further occasion (subject to a maximum of two opportunities to sit any given module), but will only be eligible for the award of a pass degree.

In order to be awarded an **honours degree of MComp**, you must obtain at least *320 credits*, of which at least *90 must be Level 4 modules*, out of the overall *360 credits* possible on the second, third and fourth years combined, provided the Examiners recommend a class II(ii) degree or above. (Classification of honours degrees is discussed in the next subsection.) Candidates whom the Examiners would place in Class III will be recommended for the award of a BA or BSc degree with honours; candidates whom the Examiners deem to be worthy of a pass shall be recommended for the award of a BA or BSc pass degree.

In particular, *in order to be awarded an MComp degree, you must pass at least 90 credits of Level 4 modules*.

Candidates for an MComp degree who have completed, and submitted themselves for assessment on, 120 credits at each of Levels 2, 3 and 4 but have not been recommended for the award of a degree may enter for a subsequent examination for each failed Level 4 module on one further occasion (subject to a maximum of two opportunities to sit any given module), but will only be eligible for the award of a BSc pass degree.

## Classification of Honours Degrees

Under the current Regulations, for each module you complete you will be awarded a mark on the University 100-point scale. This subsection describes the way that these marks contribute to the final degree classification.

The full details are available from the the University's General Regulations for First Degrees at http://calendar.dept.shef.ac.uk/calendar/06d_gen_regs_for_first_degrees.pdf. Here are the main points.

*All* your module marks (including any for which the mark is a fail) for years 2, 3 (and 4 if appropriate) are averaged, but Level 2 marks are given half the weight of Level 3 and Level 4 marks. Then two calculations are made.

**Calculation 1** (the weighted mean grade) is made in accordance with the following principles:

- where a candidate's weighted mean grade is of a value indicated in the first column, the outcome of Calculation 1 shall be the corresponding class indicated in the second column

| | | |
|---|---|---|
| 69.5 or higher | : | Class I |
| 59.5 or higher | : | Class II(i) |
| 49.5 or higher | : | Class II(ii) |
| 44.5 or higher | : | Class III |
| 39.5 or higher | : | Pass; |

- where a candidate's weighted mean grade falls within the band indicated in the first column, the outcome of Calculation 1 shall be the borderline to the corresponding class indicated in the second column

| | | |
|---|---|---|
| 68.0–69.4 | : | Class I |
| 58.0–59.4 | : | Class II(i) |
| 48.0–49.4 | : | Class II(ii) |
| 43.5–44.4 | : | Class III |
| 38.0–39.4 | : | Pass. |

**Calculation 2** (the distribution of grades) is made in accordance with the following principles:

- where the best half of a candidate's weighted grades are of a value indicated in the first column, the outcome of Calculation 2 shall be the corresponding class indicated in the second column

| | | |
|---|---|---|
| 69.5 or higher | : | Class I |
| 59.5 or higher | : | Class II(i) |
| 49.5 or higher | : | Class II(ii) |
| 44.5 or higher | : | Class III |
| 39.5 or higher | : | Pass; |

- where the best five twelfths of a candidate's weighted grades are of a value indicated in the first column, the outcome of Calculation 2 shall be the borderline to the corresponding class indicated in the second column above.

In recommending the *class of degree* to be awarded to each candidate, the Examiners shall take into account the outcomes of Calculations 1 and 2 in accordance with the following principles:

- where one Calculation places the candidate in one class and the other Calculation places the candidate in either the same class or the borderline to the same class, the candidate shall normally be recommended for the award of a degree of that class;
- where one Calculation places the candidate in one class, and the other Calculation places the candidate in the borderline to the class immediately above, the candidate shall normally be recommended for the award of a degree of the lower class;

- where one Calculation places the candidate in one class, and the other Calculation places the candidate in the class immediately below, the candidate shall be considered as being in the borderline to the higher class, and the class of the degree to be recommended by the Examiners shall normally correspond to the class indicated by the weighted mean of the grades at the final Level of study;
- where both Calculations place the candidate in the same borderline, the class of the degree to be recommended by the Examiners shall normally correspond to the class indicated by the weighted mean of the grades at the final Level of study;
- where one Calculation places the candidate in one class, or borderline to a class, and the other Calculation places the candidate in another class, or borderline to a class, neither immediately above nor below, the Examiners shall recommend the classification which, having regard to all the evidence before them, best reflects the overall performance of the candidate.

Note that the Examiners are free to vary from the formal rules for any candidate where there is strong evidence to support such a decision. In consideration of such evidence, the Examiners will seek guidance from the School's External Examiners. Also, if a candidate is awarded a classified degree (I, II(i), II(ii), or III) then the degree is an **honours** degree irrespective of whether the candidate has any failed modules.

There is a University appeals procedure, full details of which are displayed on the student notice boards listed later in this handbook. They may be also found on the web at http://www.shef.ac.uk/ssid/procedures/grid.

### Transcripts

After graduation, you may wish to obtain a transcript of your detailed module results to show prospective employers. For details see http://www.shef.ac.uk/ssid/transcript. Note that there is a small charge, which increases more than 12 months after graduation.

# 4 Help, Guidance and Information

### Personal Tutors

The SoMaS personal tutorial system operates for the rest of your course. The present arrangements are that students normally continue with the same SoMaS personal tutor as in the second year. If you envisage any problem with this then please see the Senior Tutor; it is possible for you to request a change of personal tutor. Third- and fourth-year students should go to see their tutors each semester, at the beginning of Semester 1 and in Semester 2 when the Semester 1 examination results have been published. However, questions about work concerning particular courses should generally be put to the lecturers concerned. All students are encouraged to keep in touch with their tutors who are then in a good position to act as referees when the time for job applications arrives.

There is in addition a Tutor for Men Students, who is available to discuss problems of a more personal or confidential nature. The Senior Tutor acts as a Tutor for Women Students.

If you have any difficulty in contacting your personal tutor, or he or she is unable to solve any problem or answer any query, then you can approach the Senior Tutor or the Programme Leader for your degree programme or other designated staff members (see the list at http://www.maths.dept.shef.ac.uk/maths/contact.html).

Please make sure that your home address is correct on MUSE before you leave at the end of Semester 2. You will have the same University e-mail address in 2018–2019 as this year. You should make sure your tutor knows your e-mail address, and you should check for e-mail messages when you return to Sheffield in September.

### Higher Education Achievement Report

The University has introduced a new kind of degree transcript for all new undergraduate students: the Higher Education Achievement Report or 'HEAR'. The HEAR provides a comprehensive record of your university achievements and it recognises your extra-curricular achievements as well as your academic learning. It can be used to help you identify your strengths, and to plan how to build on these to achieve your goals, and it provides employers and others with evidence of your university learning and experiences.

Find out more by visiting the HEAR website http://www.sheffield.ac.uk/ssid/hear

### Student Advice Centre, SSiD, Counselling Service, University Health Service

The Student Advice Centre (http://www.sheffield.ac.uk/ssid/contacts/advice) and Student Services Information Desk (SSiD, http://www.sheffield.ac.uk/ssid) provide assistance on a wide range of problems. Specifically, they provide advice on housing, finance, problems about harassment, and help to international students; they also help with academic matters. The Counselling Service (http://www.sheffield.ac.uk/ssid/counselling) and the University Health Service (http://www.sheffield.ac.uk/ssid/health-service) are also there to help you, and help with mental health problems can be found from http://www.sheffield.ac.uk/ssid/health-service/conditions/mental-health; strict con-

fidence is always observed.

### iSheffield

Lots of information can be found from the iSheffield mobile app (see http://www.sheffield.ac.uk/cics/isheffield). In particular your timetable should be there, and near the start of semester it should have the correct tutorial times and rooms for you.

### 301

301: Student Skills and Development Centre offers a range of services for all students:

- Maths and Statistics Help
- Academic Skills workshops
- Study Skills Sessions
- Specialist Dyslexia/SpLD tutorial Service
- Languages for All programme
- Writing Advisory Service

301 also offers an Academic Skills Certificate which can be included in your Higher Education Achievement Report (HEAR). For more details see http://www.sheffield.ac.uk/ssid/301/services

### The English Language Teaching Centre (ELTC)

If you need help with your English language then this can be provided by the ELTC. For further details see http://www.sheffield.ac.uk/eltc.

### What to do if things are not going right

Obviously, the School hopes that all of you will enjoy your degrees and your time in Sheffield. But we know that, for various reasons, some of you may have problems which may affect your studies, and that at times there are things which need to take precedence over your work.

Your first port of call within SoMaS should be your Personal Tutor, or the Senior Tutor. We may not be qualified to give you the help that you may need, but the University will have people who can, and your tutor can direct you to the appropriate help. There is a Student Advice Centre next to the Student Services Information Desk in the Student Union, who have a lot of leaflets and can also help advise you. See http://www.sheffield.ac.uk/ssid/sos for a range of services offered by the University.

For any issues that affect assessment, you need to complete an Extenuating Circumstances Form – see page 10.

If issues persist, or are very serious, you may want to take Leave of Absence, and return at a later date. For this, you will need to complete a Change of Status Form for Leave of Absence.

Some issues are discussed at http://www.shef.ac.uk/ssid/change-of-status/leave; for example, there are likely to be some financial considerations, and overseas students may face visa issues. If medical issues are the cause of the request, you will need to satisfy the University that you have recovered sufficiently before you return. Any forms which affect your "status" will require the signature of the Senior Tutor; they should then be handed in at SoMaS Reception (F10) so that we can make a copy, before being sent to Taught Programmes Office.

All forms can be downloaded from http://www.sheffield.ac.uk/ssid/forms; paper copies of all these are also available from SoMaS Reception (F10).

### Nightline

Nightline (see https://www.sheffieldnightline.co.uk) is the University of Sheffield's confidential listening and information telephone service. It is run by trained student volunteers, and operates from 8.00pm until 8.00am every night during term time. It offers students everything from the phone number of a twenty-four hour taxi company, to examination dates, times and locations, and information about many issues that can be encountered within student life. It provides a vital support network for all students, so whatever you need to say, Nightline is listening, and the service can be called free from phones in halls of residence. If you think you would like to volunteer for Nightline, contact sunl@sheffield.ac.uk for more information.

### The Careers Service

The Careers Service (whose web page is at http://www.shef.ac.uk/careers/) offers an excellent provision, backed up with a wealth of experience, to help students decide on a career and to find employment after graduation. You could also talk to the School's Careers Officer, listed on http://www.maths.dept.shef.ac.uk/maths/contact.html.

Making good career decisions will involve you in thinking about your qualities and inclinations. The Careers Service provide resources on career planning, CV writing, job seeking, interview skills, and much else. They also organise an extensive programme of careers events, which provides valuable opportunities to meet prospective graduate employers, and find out what skills they are looking for. Similar skills sessions are also offered by the University's Enterprise Zone (http://enterprise.shef.ac.uk/).

Graduates from our degrees go on to a wide range of careers. Many go on to careers for which a mathematical degree is very important; others go on to careers where degree-level education is important, though not necessarily using mathematical skills. Mathematics graduates have a strong range of transferable skills, including excellent numeracy and analytical problem solving skills. Your degrees often make use of computer packages, and these IT skills are often adapatable to IT requirements of employers. Employers also value highly the ability to communicate mathematical ideas to lay audiences.

A number of our graduates have interest in teaching; the Postgraduate Diploma in Education (PGDE) is a common qualification, and is offered in mathematics by the University of Sheffield (and many other universities). It is administered by the School of Education, and you should contact them for further information. Other graduates go on to more specialised postgraduate qualifications, including our own MSc in Statistics and MSc in Mathematics.

Students are strongly advised to make use of the wide range of resources that the Careers Ser-

vice has to offer. The Careers Service (http://www.sheffield.ac.uk/careers) is located at 241 Glossop Road in Edgar Allen House. There is also a Student Jobshop in the Student Union.

The Careers Service runs a 20-credit module CAS201 (Career Management Skills). The School of Mathematics and Statistics runs MAS279 (Career Development Skills), a dedicated careers module for Mathematics students, which is available to students on a number of our single honours programmes.

### The Staff-Student Forum

Nominations for the Staff-Student Forum will first be requested in the Spring Semester, for positions in the following academic year. Please think about the possibility of serving on the Forum. It will give you an opportunity to have a role in the organisation and management of factors influencing student life in the School of Mathematics and Statistics. The Forum usually meets twice a semester. A number of student members serve as student representatives on the School Teaching Committee.

Issues may be raised with forum members at any time. You can find more information at http://www.sheffield.ac.uk/maths/current/representation, where you can also find a feedback form which goes to SoMaS Reception and eventually to the Director of Teaching.

There are further opportunities for student representation within the Faculty of Science.

### Study room

I19 Hicks, on the 5th floor, is a study room for undergraduates. It has plenty of space, tables and chairs and a whiteboard, and is intended for quiet study. It is somewhere you can go to make productive use of time in between lectures and tutorials, and might be especially useful if you are in the Hicks Building and you do not want to use time going to the Information Commons, Library, Student Union or wherever. There is a smaller room, the Barry Jackson Room, at the back of the ground floor of the building, just before Lecture Rooms 3 and 4. This is also somewhere you can go to sit down, but with maybe less of an expectation of peace and quiet, more a social space.

### Voluntary work

The University encourages its students to consider undertaking some voluntary work. The text below has been provided by the Manager of Sheffield Volunteering, which is based in the Students' Union.

> 'Volunteering is a great way to get to know the city and its people. You can gain career-related experience or simply volunteer for something that appeals.
>
> 'You can do something just for a day or give a couple of hours each week or fortnight. It's really flexible and you won't be asked to help during exams or vacations.

'Choose from over 100 options — in student neighbourhoods and the city centre. Alternatively, we can help you to develop your own volunteer project involving other students and benefiting the wider community.

'Our staff can help you to find something that's right for you. Training and out-of-pocket expenses are provided too.

'Set yourself apart. Visit http://www.sheffieldvolunteering.info or see us in the Source (Level 3, Union Building).'

SoMaS arranges a small number of school volunteering activities itself. There is a mailing list (somas-schools-volunteers@sheffield.ac.uk) for interested students, with a very low level of traffic (maybe three emails per semester). An email will be sent around at the beginning of each academic year to find interested students, but students can be added to it at any time by emailing James Cranch (j.d.cranch@sheffield.ac.uk).

### Where else to find Information

Information will be displayed in the Hicks Building on the notice boards outside F10.

Urgent messages will be displayed in the Entrance Foyer, or sent by e-mail. Please check notice boards and your e-mail regularly.

### Office-holders in the School

A list of the members of staff who currently hold various offices in the School of Mathematics and Statistics can be found at http://www.maths.dept.shef.ac.uk/maths/contact.html.

# 5 Health and Safety

### Smoking

Students are reminded that smoking is prohibited on all University premises – this includes the area under the canopy at the main entrance to the Hicks Building. In addition, we request that you refrain from smoking on the steps immediately outside the Hicks Building.

### First Aid

First Aid boxes are available in SoMaS Reception (Room F10) and the Porters Lodge (Hicks Foyer, D Floor). Lists of qualified first-aiders can be found outside, or near to, these locations.

### Fire Alarm

If the fire alarm sounds in the Hicks Building, please proceed calmly to the nearest exit and assemble in the designated area (on the concourse, underneath the road bridge). **Do not** use lifts. **Do not** re-enter the building until you have been told that it is safe to do so by a fire officer. Note that the alarm is tested for about 30 seconds on Wednesdays at about 9.30.

# 6 Information on Mathematics and Statistics Courses

### The Aims and Learning Outcomes of the Degree Programmes

The mission of the School of Mathematics and Statistics is

- to conduct high quality research in mathematics and statistics;
- to provide an excellent and inspiring education for students;
- to support, to promote and to increase the impact of our disciplines;
- to be a research-led school that maintains high standards in all activities.

### Aims

For all the School's undergraduate programmes, the aims are:

- to provide an intellectual environment conducive to learning;
- to prepare students for careers that use their mathematical and/or statistical training;
- to provide teaching that is informed and inspired by the research and scholarship of the staff;
- to provide students with assessments of their achievements over a range of mathematical and statistical skills, and to identify and support academic excellence.

For its dual degree programmes, the School aims to provide an appropriate Mathematics component.

### Learning Outcomes

In line with the requirements of HEFCE's Teaching Quality Information initiative, the University has introduced programme specifications for undergraduate and postgraduate taught programmes to provide clear and explicit information for existing and potential students so that they can make informed choices about their studies. In addition to the Aims of the School's undergraduate programmes listed above, there are Learning Outcomes that students are expected to have developed upon successful completion of the programme and achievement of which will usually have been demonstrated via the assessment process. These differ for each degree programme offered; students may consult the latest versions at http://www.shef.ac.uk/calendar/progspec.

### Module Questionnaires

Students are strongly encouraged to complete Module Questionnaires for every module they take. These questionnaires are now administered electronically, and instructions on how to complete the questionnaires will be issued every semester.

These questionnaires are important to the School. This is your formal opportunity to give your view on aspects of the course – you can also give comments informally via your Personal Tutor, the Staff-Student Forum, to the lecturer directly, etc., and this is also appreciated.

We are always keen to hear ways to improve our teaching and your learning experience. Considered and thoughtful feedback can provide an extremely helpful input into the School's teaching.

In the same way that receiving a piece of marked work with just a mark out of 10 is not as useful as comments showing how you can improve, we would like to encourage you to be specific and constructive in your questionnaire responses. Reasoned and constructive comments you make on modules can be very helpful, both to the individual lecturer concerned, and to the School, so that we can spread good practice.

Lecturers are human beings with feelings, just like students, and if you feel the need to be critical of aspects of a module, please try to offer criticism in a sensitive way. It is always good to read positive comments as well as critical ones, so if you feel that a lecturer is doing something well, please let them know!

The questionnaires and comments are considered by members of the Staff-Student Forum, and by the School's Teaching Committee. Comments have led to changes in School procedures, as well as to alterations in course content and practice of lecturers. They also form a valuable input to the annual appraisal of staff.

Questionnaire results (and any lecturer responses) are published on the Staff-Student Forum MOLE page, where they may be viewed by all SoMaS students. Your responses can help those at lower levels make their module choices. Your considered feedback plays a valuable part in improving our teaching.

### Degree Regulations

Full details of these Regulations are available on the web, as described in the section entitled 'Official University Information for Students on the Web' on p.20. However, at the time of publication of this handbook, the Regulations on the web may be for 2017–2018 rather than 2018–2019. In particular, their lists of modules may reflect availability in 2017–2018 rather than in 2018–2019.

This booklet lists the relevant Mathematics and Statistics modules, but not those from the partner departments in these degrees. The requirements laid down for those other subjects are contained in the University Regulations. You must consult the other department for details of compulsory modules and possible options. You must take care in choosing your modules to check that you have the relevant pre-requisites. You should also be careful to avoid timetable clashes.

You are reminded that, to be eligible to enter Level 3 of an integrated masters programme such as MComp, you must normally have obtained 120 credits at Level 2 with an average of at least 54.5. Candidates for such a degree who fail to achieve the required 54.5 average in Level 2 should discuss the situation with the SoMaS Programme Leader for their degree programme.

## Specific degree regulations

### BA Accounting & Financial Management and Mathematics (MGTU14) Year 3

Candidates for this degree must take

(a) modules to the value of *40 or 60 credits* chosen from the following list of Level 3 MAS modules:

| | | |
|---|---|---|
| MAS302 | Undergraduate Ambassador Scheme in Mathematics | 20 credits |
| MAS322 | Operations Research | 10 credits |
| MAS330 | Topics in Number Theory | 10 credits |
| MAS332 | Complex Analysis | 10 credits |
| MAS334 | Combinatorics | 10 credits |
| MAS341 | Graph Theory | 10 credits |
| MAS343 | History of Mathematics | 10 credits |
| MAS345 | Codes and Cryptography | 10 credits |
| MAS360 | Practical and Applied Statistics | 20 credits |
| MAS361 | Medical Statistics | 10 credits |
| MAS362 | Financial Mathematics | 10 credits |
| MAS364 | Bayesian Statistics | 10 credits |
| MAS367 | Linear and Generalised Linear Models | 10 credits |
| MAS369 | Machine Learning | 10 credits |
| MAS370 | Sampling Theory and Design of Experiments | 10 credits |
| MAS371 | Applied Probability | 10 credits |
| MAS372 | Time Series | 10 credits |

(b) modules to the value of *60 or 40 credits* provided by the Management School as laid down in the University Regulations;

(c) unrestricted modules to the value of *20 credits* which may, for example, be taken from the MAS modules listed in the table above or from the Management modules.

### BA Business Management and Mathematics (MGTU13) Year 3

Candidates for this degree must take

(a) modules to the value of *40 or 60 credits* chosen from the following list of Level 3 MAS modules:

| | | |
|---|---|---|
| MAS302 | Undergraduate Ambassador Scheme in Mathematics | 20 credits |
| MAS322 | Operations Research | 10 credits |
| MAS330 | Topics in Number Theory | 10 credits |
| MAS332 | Complex Analysis | 10 credits |
| MAS334 | Combinatorics | 10 credits |
| MAS341 | Graph Theory | 10 credits |

| | | |
|---|---|---|
| MAS343 | History of Mathematics | 10 credits |
| MAS345 | Codes and Cryptography | 10 credits |
| MAS360 | Practical and Applied Statistics | 20 credits |
| MAS361 | Medical Statistics | 10 credits |
| MAS362 | Financial Mathematics | 10 credits |
| MAS364 | Bayesian Statistics | 10 credits |
| MAS367 | Linear and Generalised Linear Models | 10 credits |
| MAS369 | Machine Learning | 10 credits |
| MAS370 | Sampling Theory and Design of Experiments | 10 credits |
| MAS371 | Applied Probability | 10 credits |
| MAS372 | Time Series | 10 credits |

(b) modules to the value of *60 or 40 credits* provided by the Management School as laid down in the University Regulations;

(c) unrestricted modules to the value of *20 credits* which may, for example, be taken from the MAS modules listed in the table above or from the Management modules.

**BSc Computer Science and Mathematics (COMU109) Year 3**

Candidates for this degree must take

(a) modules to the value of between *40 and 80 credits* chosen from the following list of Level 3 MAS modules:

| | | |
|---|---|---|
| MAS302 | Undergraduate Ambassador Scheme in Mathematics | 20 credits |
| MAS322 | Operations Research | 10 credits |
| MAS325 | Mathematical Methods | 10 credits |
| MAS330 | Topics in Number Theory | 10 credits |
| MAS331 | Metric Spaces | 10 credits |
| MAS332 | Complex Analysis | 10 credits |
| MAS333 | Fields | 10 credits |
| MAS334 | Combinatorics | 10 credits |
| MAS336 | Differential Geometry | 10 credits |
| MAS341 | Graph Theory | 10 credits |
| MAS343 | History of Mathematics | 10 credits |
| MAS344 | Knots and Surfaces | 10 credits |
| MAS345 | Codes and Cryptography | 10 credits |
| MAS346 | Groups and Symmetry | 10 credits |
| MAS348 | Game Theory | 10 credits |
| MAS360 | Practical and Applied Statistics | 20 credits |
| MAS361 | Medical Statistics | 10 credits |
| MAS362 | Financial Mathematics | 10 credits |
| MAS364 | Bayesian Statistics | 10 credits |
| MAS367 | Linear and Generalised Linear Models | 10 credits |
| MAS370 | Sampling Theory and Design of Experiments | 10 credits |
| MAS371 | Applied Probability | 10 credits |

| | | |
|---|---|---|
| MAS372 | Time Series | 10 credits |
| MAS377 | Mathematical Biology | 10 credits |
| MAS472 | Computational Inference | 10 credits |

(b) modules to the value of *between 80 and 40 credits* provided by the Department of Computer Science as laid down in the University Regulations.

**MComp Computer Science with Mathematics (COMU118) Year 3**

Candidates for this degree must take

(a) modules to the value of *40 credits* chosen from the following list of MAS modules:

| | | |
|---|---|---|
| MAS302 | Undergraduate Ambassador Scheme in Mathematics | 20 credits |
| MAS322 | Operations Research | 10 credits |
| MAS325 | Mathematical Methods | 10 credits |
| MAS330 | Topics in Number Theory | 10 credits |
| MAS331 | Metric Spaces | 10 credits |
| MAS332 | Complex Analysis | 10 credits |
| MAS333 | Fields | 10 credits |
| MAS334 | Combinatorics | 10 credits |
| MAS336 | Differential Geometry | 10 credits |
| MAS341 | Graph Theory | 10 credits |
| MAS343 | History of Mathematics | 10 credits |
| MAS344 | Knots and Surfaces | 10 credits |
| MAS345 | Codes and Cryptography | 10 credits |
| MAS346 | Groups and Symmetry | 10 credits |
| MAS348 | Game Theory | 10 credits |
| MAS360 | Practical and Applied Statistics | 20 credits |
| MAS361 | Medical Statistics | 10 credits |
| MAS362 | Financial Mathematics | 10 credits |
| MAS364 | Bayesian Statistics | 10 credits |
| MAS367 | Linear and Generalised Linear Models | 10 credits |
| MAS370 | Sampling Theory and Design of Experiments | 10 credits |
| MAS371 | Applied Probability | 10 credits |
| MAS372 | Time Series | 10 credits |
| MAS377 | Mathematical Biology | 10 credits |
| MAS441 | Optics and Symplectic Geometry | 10 credits |
| MAS442 | Galois Theory | 10 credits |
| MAS472 | Computational Inference | 10 credits |

(b) modules to the value of *80 credits* provided by the Department of Computer Science as laid down in the University Regulations.

**MComp Computer Science with Mathematics (COMU118) Year 4**

Candidates for this degree must take modules to the value of *90 credits* provided by the Department of Computer Science as laid down in the University Regulations, together with unrestricted modules to the value of *30 credits*.

**BSc Economics and Mathematics (ECNU16) Year 3**

Candidates for this degree must take

(a) modules to the value of *40 credits* chosen from the following list of Level 3 MAS modules:

| | | |
|---|---|---|
| MAS302 | Undergraduate Ambassador Scheme in Mathematics | 20 credits |
| MAS322 | Operations Research | 10 credits |
| MAS330 | Topics in Number Theory | 10 credits |
| MAS331 | Metric Spaces | 10 credits |
| MAS332 | Complex Analysis | 10 credits |
| MAS333 | Fields | 10 credits |
| MAS334 | Combinatorics | 10 credits |
| MAS336 | Differential Geometry | 10 credits |
| MAS341 | Graph Theory | 10 credits |
| MAS343 | History of Mathematics | 10 credits |
| MAS344 | Knots and Surfaces | 10 credits |
| MAS345 | Codes and Cryptography | 10 credits |
| MAS346 | Groups and Symmetry | 10 credits |
| MAS348 | Game Theory | 10 credits |
| MAS350 | Measure and Probability | 10 credits |
| MAS352 | Stochastic Processes and Finance | 20 credits |
| MAS360 | Practical and Applied Statistics | 20 credits |
| MAS361 | Medical Statistics | 10 credits |
| MAS362 | Financial Mathematics | 10 credits |
| MAS364 | Bayesian Statistics | 10 credits |
| MAS367 | Linear and Generalised Linear Models | 10 credits |
| MAS370 | Sampling Theory and Design of Experiments | 10 credits |
| MAS371 | Applied Probability | 10 credits |
| MAS372 | Time Series | 10 credits |

(b) modules to the value of *60 or 80 credits* provided by the Economics Department as laid down in the University Regulations;

(c) unrestricted Level 3 modules to the value of up to *20 credits* which may, for example, be taken from the MAS modules listed in the table above or from the Economics modules or both. (The total number of unrestricted credits across Levels 2 and 3 combined must not exceed 20.)

**BSc Mathematics and Philosophy (MASU25) Year 3**

Candidates for this degree must take

(a) modules to the value of *50 credits* chosen from the following list of Level 3 MAS modules:

| | | |
|---|---|---|
| MAS302 | Undergraduate Ambassador Scheme in Mathematics | 20 credits |
| MAS322 | Operations Research | 10 credits |
| MAS330 | Topics in Number Theory | 10 credits |
| MAS331 | Metric Spaces | 10 credits |
| MAS332 | Complex Analysis | 10 credits |
| MAS333 | Fields | 10 credits |
| MAS334 | Combinatorics | 10 credits |
| MAS336 | Differential Geometry | 10 credits |
| MAS341 | Graph Theory | 10 credits |
| MAS343 | History of Mathematics | 10 credits |
| MAS344 | Knots and Surfaces | 10 credits |
| MAS345 | Codes and Cryptography | 10 credits |
| MAS346 | Groups and Symmetry | 10 credits |
| MAS348 | Game Theory | 10 credits |
| MAS350 | Measure and Probability | 10 credits |

(b) modules to the value of *60 credits* provided by the Department of Philosophy as laid down in the University Regulations;

(c) unrestricted modules to the value of *10 credits* which may, for example, be taken from the MAS modules listed in the table above.

# 7 Cover sheet arrangements

There are some special arrangements for when assessed coursework is to be handed in at SoMaS Reception (F10).

(i) All work that needs to be submitted to Reception needs to have a cover sheet.

(ii) Students can access the cover sheet via https://sciencecoversheet.group.shef.ac.uk/:

  (a) log in with your university user name and password;

  (b) cover sheets become available to students one week before the deadline to avoid early submissions;

  (c) cover sheets are unique to each student – printing out a coversheet for a friend doesn't work!

(iii) This then needs to be stapled (or in a plastic wallet) and then posted into the drop box outside reception (the drop box is provided for work that is either late/early or being submitted out of office opening times).

If students have any problems with regards to viewing/accessing the cover sheets, contact hickstudentsupport@sheffield.ac.uk or visit Reception to try and sort out the problem.

## MAS302: Undergraduate Ambassadors Scheme

Semester: Year 20 credits

| | |
|---|---|
| Prerequisites: | Agreement of module co-ordinator |
| Corequisites: | |
| Cannot be taken with: | COM3550 (Undergraduate Ambassadors Scheme in Computer Science) |
| Prerequisite for: | |

### Description

MAS302 is a course which involves no formal lectures but which, instead, places students in the classroom environment of the Mathematics Departments of local secondary schools. The time spent within the allocated school is highly structured to ensure the desired outcomes of the course - see "Outcomes" and "Syllabus". Note that although the classroom activities take place in the Spring semester, there is a selection process and some training which is held in the Autumn semester. Every student who has been offered a place on the course will need to pass a DBS check (see https://www.gov.uk/disclosure-barring-service-check/overview). This is to ensure that you have no previous convictions which may make you unable to work with children. These checks can be very fast, but have taken up to 40 days.
A student accepted on the course who has successfully attended the Training Day and passed the DBS check will not be allowed to change this module. This is due to the fact that schools spend a lot of time organising having an undergraduate ambassador, and once a school has accepted a student it is important that the student is committed to this course.

### Aims

- To develop students' confidence in their ability to act independently in the execution of complex and important tasks;
- To develop the complex skills required to communicate difficult subjects in a variety of ways to people of widely varying abilities;
- To develop the personal skills required to engage the attention of people as individuals and of people in groups;
- To learn the specific skills required to develop projects and teaching methods appropriate to the age group of pupils under tuition;
- To inspire a new generation of prospective undergraduates by providing positive role models in the classroom;
- To stimulate pupils by conveying the excitement of their subject and showing the long-term benefits of studying;
- To provide additional classroom support for teachers in the form of an assistant who can work with pupils at any point on the ability spectrum;
- To provide a short, but direct, experience of teaching to those interested in pursuing it as a career.

### Outline syllabus

A competitive interview system will be used to select students for the module, and to match each successful applicant with an appropriate school and a specific teacher in the local area. An initial day of training - held before Christmas - will provide the students with an introduction to working and conduct in the school environment. Each student selected will be required to visit the school they will be working in before commencement of the unit - this visit will usually take place before Christmas. The students will be required to spend half a day (approximately 4 hours) each week in the school for ten weeks of the second semester. It is intended that there will be no formal lectures associated with the unit, and that wherever appropriate the students' own ideas will increasingly define the nature of their teaching activities as they become more experienced. However, there will be supporting tutorials which will provide an opportunity for students to share their experiences with their contempories and the module coordinators. The teachers will act as the main source of guidance but, in addition, students will be able to discuss their progress with the module coordinators whenever necessary.

## Assessment

A weekly diary [10%]; End-of-module written report [35%]; A written account of your special project [20%]; A fifteen minute oral presentation [20%]; Assessment by the teacher moderated by module coordinator [7.5%]; Overall impression of the portfolio [7.5%].

## MAS322: Operations Research

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS211 (Advanced Calculus and Linear Algebra) |
| Corequisites: | |
| Cannot be taken with: | MAS423 (Advanced Operations Research) |
| Prerequisite for: | |

### Description

Mathematical Programming is the title given to a collection of optimisation algorithms that deal with constrained optimisation problems. Here the problems considered will all involve constraints which are linear, and for which the objective function to be maximised or minimised is also linear. Some of these problems are not continuously differentiable; special algorithms have to be developed. The module considers first how these problems arise from practical applications, then introduces the solution of such problems, and finally explains the important area of post-optimality analysis where we answer questions about the effects of changes in the parameters of the problem on the optimal solution.

### Aims

- To develop the mathematical skills that will provide you with the appropriate foundations for further mathematical studies.
- To enable you to analyse OR problems that may arise in your future employment.

### Outline syllabus

- Building linear programming, integer programming and piecewise linear programming models
- Graphical techniques
- The Simplex Method and variants
- Matrix representation of the simplex algorithm
- Elementary post-optimality analysis
- Duality and applications in post-optimality analysis

#### Module Format

**C** Winston "Introduction to Mathematical Programming" (Shelfmark 519.7 (W), ISBN 0534359647)

### Assessment

One formal 2 hour written examination with 4 compulsory questions [75%]. Mini-project [25%].

## MAS325: Mathematical Methods

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS211 (Advanced Calculus and Linear Algebra) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

This course introduces methods which are useful in many areas of mathematics. The emphasis will mainly be on obtaining approximate solutions to problems which involve a small parameter and cannot easily be solved exactly. These problems will include the evaluation of integrals. Examples of possible applications are: oscillating motions with small nonlinear damping, the effect of other planets on the Earth's orbit around the Sun, boundary layers in fluid flows, electrical capacitance of long thin bodies, central limit theorem correction terms for finite sample size.

### Aims

- To develop methods for solving differential equations using integral transforms and representations.
- To introduce asymptotic methods for solving algebraic equations.
- To introduce asymptotic methods for evaluating integrals.

### Outline syllabus

- Integral methods and differential equations: Dirac $\delta$-function, Fourier and Laplace transforms, applications to differential equations, Green functions.
- Asymptotic expansions: algebraic equations with small parameter, asymptotic expansion of functions defined by integrals.

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

**C** Van Dyke "Perturbation Methods in Fluid Mechanics" (Shelfmark 532 (V), ISBN 0915760010)

### Assessment

One formal 2 hour written examination. Format: 4 questions from 5.

## MAS330: Topics in Number Theory

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS211 (Advanced Calculus and Linear Algebra) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | MAS345 (Codes and Cryptography) |

### Description

The course covers topics in elementary Number Theory. This includes Modular Arithmetic, and properties of primes and integers. Most of the material (with the notable exception of the RSA cryptosystem) has been introduced by Fermat, Euler and Gauss in the 17th, 18th and 19th centuries.

### Aims

- To introduce various topics in number theory

### Outline syllabus

1. Modular Arithmetic
    - Linear Congruences
    - Fermat's Little Theorem and the RSA cryptosystem.
    - Arithmetic functions.
    - Euler's function and Euler's theorem.
    - Gauss' Quadratic Reciprocity Law.
2. Primes, Integers and Equations
    - Perfect numbers, Mersenne primes, Fermat primes.
    - Pythagorean triples and Fermat Last Theorem.
    - Fibonacci numbers.
    - Continued fractions.
    - Pell's equation.

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

**B** Burton "Elementary Number Theory" (Shelfmark 512.81 (B), ISBN 0071121749)

**C** Singh "Fermat's Last Theorem" (Shelfmark 511.52(S), ISBN 000724181X)

### Assessment

One formal 2.5 hour written examination. Format: 4 questions from 4.

## MAS331: Metric Spaces

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS221 (Analysis) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | MAS435 (Algebraic Topology); MAS436 (Functional Analysis) |

### Description

This unit explores ideas of convergence of iterative processes in the more general framework of metric spaces. A metric space is a set with a "distance function" which is governed by just three simple rules, from which the entire analysis follows. The course follows on from MAS221 Analysis, and adapts some of the ideas from that course to the more general setting. The course ends with the Contraction Mapping Theorem, which guarantees the convergence of quite general processes; there are applications to many other areas of mathematics, such as to the solubility of differential equations.

### Aims

- To point out that iterative processes and convergence of sequences occur in many areas of mathematics, and to develop a general context in which to study these processes
- To provide a basic course in analysis in this setting
- To reinforce ideas of proof
- To illustrate the power of abstraction and show why it is worthwhile
- To provide a foundation for later analysis courses

### Outline syllabus

- Examples of iterative processes in various settings
- Metric spaces: definition, properties and examples
- Convergence of sequences
- Closed subsets, continuity
- Cauchy sequences, completeness, compactness
- The Contraction Mapping Theorem

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

**B** Bryant "Metric Spaces: Iteration and Application" (Shelfmark 512.811 (B), ISBN 0521268575)

**B** Carothers "Real Analysis" (Shelfmark 517.51 (C), ISBN 0521497493)

**B** Haaser and Sullivan "Real Analysis" (Shelfmark 517.51(H), ISBN 0486665097)

**C** Kreyszig "Introductory Functional Analysis with Applications" (Shelfmark 517.5 (S), ISBN 0471507318)

### Assessment

One formal 2.5 hour written examination. Format: 4 compulsory questions.

## MAS332: Complex Analysis

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS211 (Advanced Calculus and Linear Algebra) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | MAS430 (Analytic Number Theory); MAS436 (Functional Analysis); Desirable but not essential for MAS342 (Applicable Analysis) |

### Description

It is natural to use complex numbers in algebra, since these are the numbers we need to provide the roots of all polynomials. In fact, it is equally natural to use complex numbers in analysis, and this course introduces the study of complex-valued functions of a complex variable. Complex analysis is a central area of mathematics. It is both widely applicable and very beautiful, with a strong geometrical flavour. This course will consider some of the key theorems in the subject, weaving together complex derivatives and complex line integrals. There will be a strong emphasis on applications.

### Aims

- To introduce complex functions of a complex variable
- To demonstrate the critical importance of differentiability of complex functions of a complex variable, and its surprising relation with path-independence of line integrals
- To demonstrate the relevance of power series in complex analysis
- To develop the subject of complex analysis rigorously, highlighting its logical structure and proving several of the fundamental theorems
- To discuss some applications of the theory, including to the calculation of real integrals

### Outline syllabus

- Revision of complex numbers
- Special functions
- Simple integrals of complex-valued functions
- Open sets, neighbourhoods and regions
- Differentiability; Cauchy-Riemann equations, harmonic functions
- Power series and special functions
- Complex line integrals
- Cauchy's Theorem
- Cauchy's integral formula and Cauchy's formula for derivatives
- Liouville's Theorem
- The Fundamental Theorem of Algebra
- Taylor's Theorem
- Laurent's Theorem and singularities
- Cauchy's Residue Theorem and applications

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

**B** Priestley "Introduction to Complex Analysis" (Shelfmark 517.53 (P), ISBN 0198534299)
**B** Stewart and Tall "Complex Analysis" (Shelfmark 517.53 (S), ISBN 0521245133)
**B** Wunsch "Complex Variables with Applications" (ISBN 0201122995)
**C** Spiegel "Complex Variables" (Shelfmark 517.53 (S), ISBN 0070843821)

### Assessment

One formal 2.5 hour written examination. Format: 4 questions from 5.

## MAS333: Fields

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS220 (Algebra) |
| Corequisites: | |
| Cannot be taken with: | MAS438 (Fields) |
| Prerequisite for: | Either this module or MAS438 (Fields) is needed for MAS442 (Galois Theory) |

### Description

A field is a set where the familiar operations of arithmetic are possible. It often happens, particularly in the theory of equations, that one needs to extend a field by forming a bigger one. The aim of this course is to study the idea of field extension and various problems where it arises. In particular, it is used to answer some classical problems of Greek geometry, asking whether certain geometrical constructions, such as angle trisection or squaring the circle, are possible.

### Aims

- To illustrate how questions concerning the complex roots of real or rational polynomial equations can quickly lead to the study of subfields of the field of complex numbers
- To consolidate previous knowledge of field theory and vector space theory
- To illustrate how the general mathematical theory of vector spaces can be used to good effect in the theory of field extensions
- To illustrate how the theory of dimensions of vector spaces can be used to prove that certain ruler and compass constructions are impossible
- To illustrate the relevance of factorization of polynomials to the theory of algebraic field extensions

### Outline syllabus

- Field extensions
- Factorization of polynomials
- Simple field extensions
- Towers of fields
- Ruler and compass constructions
- Groups of automorphisms
- Finite fields
- The Frobenius automorphism

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

**B** Allenby "Rings, Fields and Groups" (Shelfmark 512.8 (A), ISBN 0340544406)

**B** Fraleigh "A First Course in Abstract Algebra" (Shelfmark 512.8 (F), ISBN 0201534673)

**B** Herstein "Abstract Algebra" (Shelfmark 512.8 (H), ISBN 0023538228)

**B** Stewart "Galois Theory" (Shelfmark 512.43 (S), ISBN 0412345404)

### Assessment

One formal 2.5 hour written examination. Format: 4 questions from 4.

## MAS334: Combinatorics

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS211 (Advanced Calculus and Linear Algebra) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

Combinatorics is the mathematics of selections and combinations. For example, given a collection of sets, when is it possible to choose a different element from each of them? That simple question leads to Hall's Theorem, a far-reaching result with applications to counting and pairing problems throughout mathematics.

### Aims

- To illustrate the wide range of selection problems in combinatorial mathematics
- To teach the basic techniques of selection and arrangement problems
- To show how to solve a wide range of natural counting problems using these techniques

### Outline syllabus

- The binomial coefficients
- Three basic principles: parity, pigeon-holes and inclusion/exclusion
- Rook polynomials
- Hall's Marriage Theorem and its applications
- Latin squares
- Block designs and codes

**Module Format**

| | | |
|---|---|---|
| Lectures 20 | Tutorials 0 | Practicals 0 |

### Recommended books

**B** Anderson "A First Course in Combinatorial Mathematics" (Shelfmark 519.21 (A), ISBN 0198596731)

**B** Bryant "Aspects of Combinatorics" (Shelfmark 519.21 (B), ISBN 0521429978)

### Assessment

One formal 2.5 hour examination. Format: answer all questions.

## MAS336: Differential Geometry

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS211 (Advanced Calculus and Linear Algebra) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

## Description

Differential geometry is the study of geometric objects using calculus, and it has many applications in other sciences and engineering. In this introductory course, the geometric objects of interest will be curves and surfaces. You will learn more about such familiar notions as arc lengths, angles and areas. You will also learn how to quantify the 'shape' of an object, via various notions of *curvature*. There are rich interactions between curvature and other geometric quantities, exemplified most notably by *Gauss' Theorem* and the *Gauss-Bonnet Formula*. For example, one can make a map of the Earth that correctly represents either all angles or all areas; but by Gauss' Theorem, the Earth's curvature prevents one from ever making a map that correctly represents distances. The Gauss-Bonnet Formula is a far-reaching result. For example, its local version computes the sum of angles in any triangle on a general surface. On the other hand, its global version reveals a deep connection between small- and large-scale behaviours of a surface.

## Aims

- Introduce differential geometry: its goals, techniques and applications
- Convert intuitive ideas into mathematical concepts that allow quantitative studies and development of sophisticated results
- Illustrate geometric concepts and results through many examples

## Outline syllabus

**Curves in $R^2$**

- Basic notions and examples
- Curvature

**Surfaces in $R^3$**

- Basic notions and examples
- Metric quantities
- Curvature
- Gauss' Theorem and the Gauss-Bonnet Formula

**Module Format**

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

## Recommended books

**B** Pressley "Elementary Differential Geometry" (Shelfmark 513.73 (P), ISBN 1852331526)

## Assessment

One formal 2.5 hour written examination. Format: 4 questions from 5.

## MAS341: Graph Theory

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS211 (Advanced Calculus and Linear Algebra) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

A "graph" is a simple mathematical structure consisting of a collection of points, some pairs of which are joined by lines. Their basic nature means that they can be used to illustrate a wide range of situations. The aim of this course is to investigate the mathematics of these structures and to use them in a wide range of applications. Topics covered include trees, Eulerian and Hamiltonian graphs, planar graphs, embedding of graphs in surfaces, and graph colouring.

### Aims

- To expound the theory of graphs with brief consideration of some algorithms

### Outline syllabus

- Definition and examples
- Trees
- Eulerian graphs
- Hamiltonian graphs
- The Travelling Salesman Problem
- The Shortest and Longest Path Algorithms
- Planar graphs
- Embedding graphs in surfaces
- Vertex colouring
- Edge colouring
- Face colouring

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

**B** Bryant "Aspects of Combinatorics" (Shelfmark 519.21 (B), ISBN 0521429978)

**B** Wilson "Introduction to Graph Theory" (Shelfmark 513.83 (W), ISBN 0582249937)

**C** Wilson "Four Colours Suffice" (Shelfmark 513.83 (W), ISBN 014100908x)

### Assessment

One formal 2.5 hour written examination. Format: 4 questions from 5.

## MAS343: History of Mathematics

Semester: 2 10 credits

Prerequisites:
Corequisites:
Cannot be taken with:
Prerequisite for:

## Description

The course aims to introduce the student to the study of the history of mathematics. The main topics discussed are Egyptian and Babylonian mathematics, early Greek mathematics, Renaissance mathematics, and the early history of the calculus.

## Aims

- To introduce the student to the history of mathematics
- To place mathematical developments into historical perspective
- To train the student to study from a set text
- To encourage independent study and use of the University's libraries
- To allow students to research a topic and then write up a formal report or produce a poster on their findings, which counts towards the continuous assessment part of the course
- To discuss developments in mathematics in various periods, including its beginnings in the Egyptian and Mesopotamian civilizations, its flowering under the ancient Greeks and its renaissance in sixteenth-century Europe.
- To trace the pre-history of the calculus from its beginnings in Greece to its rapid expansion in seventeenth-century Europe.

## Outline syllabus

- Introduction
- Egypt and Mesopotamia
- Early Greek mathematics
- Renaissance mathematics
- The route to the calculus

**Module Format**

| Lectures 20 | Tutorials 0 | Practicals 0 |
|---|---|---|

## Recommended books

**A** Boyer and Merzbach "A History of Mathematics" (Shelfmark 510.9 (B), ISBN 0471543977)

**B** Katz "A History of Mathematics" (Shelfmark 510.9 (K), ISBN 0321016181)

**C** Fauvel and Gray "The History of Mathematics: A Reader" (Shelfmark 510.9 (H), ISBN 0333427912)

## Assessment

One formal 2.5 hour written examination [69%]. Format: 1 compulsory question plus 3 questions from 4. Coursework [31%].

## MAS344: Knots and Surfaces

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS114 (Numbers and Groups) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

## Description

The course studies knots, links and surfaces in an elementary way. The key mathematical idea is that of an algebraic invariant: the Jones polynomial for knots, and the Euler characteristic for surfaces. These invariants will be used to classify surfaces, and to give a practical way to place a surface in the classification. Various connections with other sciences will be described.

## Aims

- To present a classification, that of compact surfaces, beginning from definitions and basic examples
- To instill an intuitive understanding of knots and compact surfaces
- To introduce and illustrate discrete invariants of geometric problems
- To show that adding extraneous structure may give information independent of that structure
- To develop the theory of the Euler characteristic
- To illustrate how a general mathematical theory can apply to quite different physical objects, and solve very specific problems about them

## Outline syllabus

- Knots and links
- The Jones polynomial
- Surfaces
- The Euler characteristic

### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

## Recommended books

**B** Firby and Gardiner "Surface Topology" (Shelfmark 513.83 (F), ISBN 1898563772)

**C** Adams "The Knot Book" (Shelfmark 513.83 (A), ISBN 0821836781)

**C** Cundy and Rollett "Mathematical Models" (Shelfmark 510.84 (C), ISBN 0906212200)

**C** Kauffman "On Knots" (Shelfmark 513.83 (K), ISBN 0691084351)

## Assessment

One formal 2.5 hour written examination. Format: 4 compulsory questions.

## MAS345: Codes and Cryptography

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS211 (Advanced Calculus and Linear Algebra); MAS330 (Topics in Number Theory) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

The word 'code' is used in two different ways. The ISBN code of a book is designed in such a way that simple errors in recording it will not produce the ISBN of a different book. This is an example of an 'error-correcting code' (more accurately, an error-detecting code). On the other hand, we speak of codes which encrypt information — a topic of vital importance to the transmission of sensitive financial information across the internet. These two ideas, here labelled 'Codes' and 'Cryptography', each depend on elegant pure mathematical ideas: codes on linear algebra and cryptography on number theory. This course explores these topics, including the real-life applications and the mathematics behind them.

### Aims

- To introduce the basic ideas connected with error detection and error correction, and various examples of useful codes
- To demonstrate the importance of the simple concepts of Hamming distance and the minimum distance of a code in the theory of error detection and error correction
- To illustrate how linear algebra can be used to good effect in the theory of linear codes
- To give an overview of cryptography from the most basic examples to modern public key systems
- To introduce the number-theoretic concepts used in public-key cryptosystems and to show how these are applied in practical examples

### Outline syllabus

- Codes and linear codes
- Hamming distance
- Examples of error-correcting/error-detecting codes
- Classical methods of cryptography
- Results from number theory
- Public key methods of cryptography

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

**C** Hill "A First Course in Coding Theory" (Shelfmark 003.54 (H), ISBN 0198538030)

**C** Young "Mathematical Ciphers: from Caesar to RSA" (ISBN 0821837303)

### Assessment

One formal 2.5 hour written examination. Format: 4 compulsory questions, two on Codes and two on Cryptography.

## MAS346: Groups and Symmetry

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS211 (Advanced Calculus and Linear Algebra); MAS220 (Algebra) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

Groups arise naturally as collections of symmetries. Examples considered include symmetry groups of Platonic solids and of wallpaper patterns. Groups can also act as symmetries of other groups. These actions can be used to prove the Sylow theorems, which give important information about the subgroups of a given finite group, leading to a classification of groups of small order.

### Aims

- To consolidate previous knowledge of group theory, symmetries and linear algebra
- To display and exemplify the ubiquity of groups as symmetries of physical and mathematical objects
- To introduce and illustrate the process of analysis of a finite group from its local structure

### Outline syllabus

- Orthogonal and special orthogonal symmetries of $\mathbf{R}^n$
- Group actions, Sylow theorems, and simple groups
- Symmetry and direct symmetry groups
- Affine isometries
- Wallpaper groups
- Groups of symmetries of the platonic solids
- Groups of small order

#### Module Format

| | | |
|---|---|---|
| Lectures 20 | Tutorials 0 | Practicals 0 |

### Recommended books

**C** Artin "Algebra" (Shelfmark 512 (A), ISBN 0130047635)

### Assessment

One formal 2.5 hour written examination.

## MAS348: Game Theory

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS113 (Introduction to Probability and Statistics) recommended; MAS211 (Advanced Calculus and Linear Algebra) |
| Corequisites: | |
| Cannot be taken with: | ECN306 (Game Theory for Economists) |
| Prerequisite for: | |

### Description

The module will give students an opportunity to apply previously acquired mathematical skills to the study of Game Theory and to some of its applications in Economics.

### Aims

- To understand the mathematical concept of a game and to see its manifestations in various real-life settings.
- To understand the notion of Nash equilibrium.
- To understand the technique of backward induction and its applications in the context of sequential games.
- To understand the notion of subgame-perfect Nash equilibria in sequential games.
- To understand the complexities of repeated games.
- To understand the concept of a Bayesian Game and their Nash equilibria.

### Outline syllabus

- The formal definition of games both in strategic for and in sequential form.
- Dominated strategies and the solution of games by iterative elimination of dominated strategies.
- Pure and mixed Nash equilibria of games.
- Sequential games: backward induction, Zermelo's Theorem, subgame perfect Nash equilibria and imperfect information.
- Translation of games in normal form to sequential form and viceversa.
- Applications of game theoretical techniques to real-life problems, e.g., in Economics.
- The notion of equilibria of repeated games.
- Bayesian games and their equilibria.

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

**B** K.G. Binmore "Playing for Real: a Text on Game Theory" (Shelfmark 519.3 (B), ISBN 978-0195300574)

**B** M.J. Osborne "An Introduction to Game Theory" (Shelfmark 519.3(O), ISBN 9780195322484)

### Assessment

One 2.5 hour exam.

## MAS350: Measure and Probability

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS211 (Advanced Calculus and Linear Algebra); MAS221 (Analysis) |
| Corequisites: | |
| Cannot be taken with: | MAS451 (Measure and Probability) |
| Prerequisite for: | Recommended for MAS352 or MAS452 (Stochastic Processes and Finance) |

### Description

Measure theory is that branch of mathematics which evolves from the idea of "weighing" a set by attaching a non-negative number to it which signifies its worth. This generalises the usual physical ideas of length, area and mass as well as probability. It turns out (as we will see in the course) that these ideas are vital for developing the modern theory of integration.
The module will give students an additional opportunity to develop skills in modern analysis as well as providing a rigorous foundation for probability theory. In particular it would form a useful precursor or companion course to the Level 4 courses MAS436 (Functional Analysis) and MAS452 (Stochastic Processes and Finance), the latter of which is fundamentally dependent on measure theoretic ideas.

### Aims

- Give a more rigorous introduction to the theory of measure.
- Develop the ideas of Lebesgue integration and its properties.
- Recall the concepts of probability theory and consider them from a measure theoretic point of view.
- Prove the Central Limit Theorem using these methods.

### Outline syllabus

- The scope of measure theory,
- $\sigma$-algebras,
- Properties of measures,
- Measurable functions,
- The Lebesgue integral,
- Interchange of limit and integral,
- Probability from a measure theoretic viewpoint,
- Characteristic functions,
- The central limit theorem.

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

### Assessment

One 2.5 hour exam.

## MAS352: Stochastic Processes and Finance

Semester: Year 20 credits

| | |
|---|---|
| Prerequisites: | MAS113 (Introduction to Probability and Statistics);<br>MAS221 (Analysis);<br>MAS275 (Probability Modelling);<br>MAS223 (Statistical Inference and Modelling) recommended |
| Corequisites: | MAS350 or MAS451 (Measure and Probability) recommended |
| Cannot be taken with: | MAS452 (Stochastic Processes and Finance) |
| Prerequisite for: | |

### Description

A stochastic process is a mathematical model for a randomly evolving system. In this course we study several examples of stochastic process and analyse their behaviour. We apply our knowledge of stochastic processes to mathematical finance, in particular to asset pricing and the Black-Scholes model.

### Aims

- Introduce probability spaces, $\sigma$-fields and conditional expectation.
- Introduce martingales and study their basic properties.
- Analyse the behaviour of different types of stochastic process, such as random walks, urn models and branching processes.
- Explain the role of arbitrage and arbitrage free pricing.
- Use finite market models to price and hedge a range of financial derivatives.
- Introduce Brownian motion and study its basic properties.
- Introduce stochastic calculus, Ito's formula and stochastic differential equations.
- Derive the Black-Scholes formula in continuous time and use it to price a range of financial derivatives.
- Study extensions of the Black-Scholes formula.

### Outline syllabus

- **Stochastic Processes**: We introduce conditional expectation and martingales, which are used to study the behaviour of stochastic processes such as random walks, urn models, branching processes, Brownian motion and diffusions. Stochastic integration with respect to Brownian motion is introduced.
- **Stochastic Finance**: We study the key concept of arbitrage and arbitrage free pricing, both in finite markets and in the continuous time Black-Scholes model.

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 40 | Tutorials | 0 | Practicals | 0 |

### Recommended books

### Assessment

One formal 3 hour written closed book examination.

## MAS360: Practical and Applied Statistics

Semester: Year 20 credits

| | |
|---|---|
| Prerequisites: | MAS223 (Statistical Inference and Modelling) |
| Corequisites: | MAS367 (Linear and Generalised Linear models) recommended |
| Cannot be taken with: | MAS301 (Group Project) |
| Prerequisite for: | |

### Description

This course aims to give you practice in solving problems of the sort you will encounter in real life as a professional mathematician or statistician. It gives training and practice in the various stages: problem definition, preliminary examination of data, modelling, analysis, computation, interpretation and communication of results. It is comprised of a series of exercises (not assessed) and projects (assessed).
Teaching is directed towards skills development. Use of R for linear modelling is revised; specific guidance is given regarding presentation skills (oral and written) and group working; but no new technical material is taught. Instead, you are encouraged to recall and collate the technical material gained over the entire remainder of your degree programme and to identify and implement those methods which are appropriate and useful in addressing the problem at hand. This vital skill, of synthesizing and evaluating your existing knowledge, allows you to show yourself at your best in examinations, interviews and the early days of a future career.

### Aims

- To develop students' skills in open-ended tasks with a substantial statistical aspect.
- To develop students' abilities to report on the results of their investigations.

### Outline syllabus

There is no technical syllabus for this course; indeed it is deliberately arranged that no new theory is needed, although students may need to use extended versions of familiar topics or invent ad hoc methods. Instruction is given in writing reports and in tackling imprecisely worded or open-ended problems. Feedback on projects attempted continues this instruction.

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 30 | Tutorials | 0 | Practicals | 0 |

### Recommended books

- There are no recommended books for this course.

### Assessment

Entirely continuous assessment, through project reports and presentations. The weighting and deadlines will be announced during the module.

## MAS361: Medical Statistics

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS223 (Statistical Inference and Modelling) |
| Corequisites: | |
| Cannot be taken with: | MAS461 (Medical Statistics) |
| Prerequisite for: | |

### Description

This course comprises sections on Clinical Trials and Survival Data Analysis. The special ethical and regulatory constraints involved in experimentation on human subjects mean that Clinical Trials have developed their own distinct methodology. Students will, however, recognise many fundamentals from mainstream statistical theory. The course aims to discuss the ethical issues involved and to introduce the specialist methods required. Prediction of survival times or comparisons of survival patterns between different treatments are examples of paramount importance in medical statistics. The aim of this course is to provide a flavour of the statistical methodology developed specifically for such problems, especially with regard to the handling of censored data (e.g., patients still alive at the close of the study). Demonstrating implementation of the statistical analyses in the R package is an important part of the course.

### Aims

- To illustrate applications of statistics within the medical field.
- To introduce students to some of the distinctive statistical methodologies developed to tackle problems specifically related to clinical trials and the analysis of survival data.

### Outline syllabus

- **Clinical Trials:**
  - **Basic concepts and designs:** controlled and uncontrolled clinical trials; historical controls; protocol; placebo; randomisation; blind and double blind trials; ethical issues; protocol deviations.
  - **Size of trials.**
  - **Multiplicity and meta-analysis:** interim analyses; multi-centre trials; combining trials.
  - **Cross-over trials.**
  - **Binary response data:** logistic regression modelling; McNemar's test, relative risks, odds ratios.
- **Survival Data Analysis:**
  - **Basic concepts:** survivor function; hazard function; censoring.
  - **Single sample methods:** lifetables; Kaplan-Meier survival curve; parametric models.
  - **Two sample methods**: log-rank test; parametric comparisons.
  - **Regression models**: inclusion of covariates; Cox's proportional hazards model.

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 18 | Tutorials | 2 | Practicals | 0 |

### Recommended books

**A** Everitt and Rabe-Heskith "Analyzing Medical Data Using S-Plus" (Shelfmark 610.285 (E))

**A** Matthews "An Introduction to Randomized Controlled Clinical Trials" (Shelfmark 615.50724)

**B** Altman "Practical Statistics for Medical Research" (Shelfmark 519.023 (A), ISBN 1584880392)

**B** Campbell "Statistics at Square Two" (Shelfmark 519.023 (C), ISBN 1405134909)

**B** Collett "Modelling Survival Data in Medical Research" (Shelfmark 610.727 (C), ISBN 1584883251)

### Assessment

One formal 2 hour written examination. Format: 3 questions from 4.

## MAS362: Financial Mathematics

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS223 (Statistical Inference and Modelling); MAS221 (Analysis) recommended |
| Corequisites: | |
| Cannot be taken with: | MAS462 (Financial Mathematics) |
| Prerequisite for: | |

### Description

The discovery of the Capital Asset Pricing Model by William Sharpe in the 1960's and the Black-Scholes option pricing formula a decade later mark the beginning of a very fruitful interaction between mathematics and finance. The latter obtained new powerful analytical tools while the former saw its knowledge applied in new and surprising ways. (A key result used in the derivation of the Black-Scholes formula, Ito's Lemma, was first applied to guide missiles to their targets; hence the title 'rocket science' applied to financial mathematics). This course describes the mathematical ideas behind these developments together with their applications in modern finance.

### Aims

- To introduce students to the mathematical ideas and methods used in finance.
- To familiarise students with financial instruments such as shares, bonds, forward contracts, futures and options.
- To familiarise students with the notion of arbitrage and the notion of no-arbitrage pricing.
- To introduce the binomial tree and geometric Brownian motion models for stock prices.
- To familiarise students with the Black-Scholes option pricing method.
- To introduce the Capital Asset Pricing Model.

### Outline syllabus

- Introduction, arbitrage, forward and futures contracts
- Options, binomial trees, risk-neutral valuation
- Brownian motion and share prices, the Black-Scholes analysis
- Portfolio theory, the Capital Asset Pricing Model

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

**B** Capinski and Zastawniak "Mathematics for Finance: An Introduction to Financial Engineering" (Shelfmark 332.0151 (C), ISBN 1852333308)

**B** Sharpe "Portfolio Theory and Capital Markets" (Shelfmark 332.6 (S), ISBN 0071353208)

### Assessment

One formal 2.5 hour written examination. Format: 4 questions from 4.

## MAS364: Bayesian Statistics

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS223 (Statistical Inference and Modelling) |
| Corequisites: | |
| Cannot be taken with: | MAS464 (Bayesian Statistics) |
| Prerequisite for: | Either this module or MAS464 (Bayesian Statistics) is needed for MAS472 (Computational Inference) |

### Description

This unit develops the Bayesian approach to statistical inference. The Bayesian method is fundamentally different in philosophy from conventional frequentist/classical inference, and has been the subject of some controversy in the past. It is, however, becoming increasingly popular in many fields of applied statistics. This course will cover both the foundations of Bayesian statistics, including subjective probability, utility and decision theory, and modern computational tools for practical inference problems, specifically Markov Chain Monte Carlo methods and Gibbs sampling. Applied Bayesian methods will be demonstrated in a series of case studies using the programming language R.

### Aims

- To extend understanding of the practice of statistical inference.
- To familiarize the student with the Bayesian approach to inference.
- To describe computational implementation of Bayesian analyses.

### Outline syllabus

- Subjective probability.
- Inference using Bayes' Theorem. Prior distributions. Exponential families. Conjugacy. Exchangeability.
- Predictive inference.
- Utility and decisions. Tests and interval estimation from a decision-theoretic perspective.
- Hierarchical models.
- Computation. Gibbs sampling. Metropolis-Hastings. Case studies.
- Linear regression.

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 3 |

### Recommended books

**B** Gelman, Carlin, Stern and Rubin "Bayesian Data Analysis" (Shelfmark 519.42 (W), ISBN 0412039915)

**B** Lee "Bayesian Statistics: An Introduction" (Shelfmark 519.542 (L), ISBN 0340814055)

### Assessment

One formal 2 hour written examination [85%]. Format: 3 questions from 4. Continuous assessment [15%]; three assignments, each worth 5%.

## MAS367: Linear and Generalised Linear Models

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS223 (Statistical Inference and Modelling) |
| Corequisites: | |
| Cannot be taken with: | MAS467 (Linear and Generalised Linear Models) |
| Prerequisite for: | Either this module or MAS467 (Linear and Generalised Linear Models) is needed for MAS474 (Extended Linear Models)<br>Recommended for MAS360 (Practical and Applied Statistics) and for MAS370 (Sampling Theory and Design of Experiments) |

### Description

The module will further develop the general theory of linear models, building on theory taught in MAS223. Extensions from the L2 course will include methods for dealing with large numbers of independent variables. The module will also introduce generalised linear models, which can be used for modelling data such as binary data and count data, where a normal distribution would not be appropriate. These developments dramatically extend the range of problems that can be studied. The methods will be implemented using R.

### Aims

- To review and extend the students knowledge of the standard linear model, building on concepts introduced at L2.
- To introduce the theory of generalised linear models.
- To show how these methods are applied to data, and what kinds of conclusions are possible.
- To demonstrate the fitting and interpretation of linear and generalised linear models to data using the statistical computing language R.

### Outline syllabus

- Basics representation of linear models in matrix form including LS estimator of $\beta$ and its covariance; estimator of $\sigma^2$; residuals and fitted values.
- General framework for testing linear null hypotheses of the form $C\beta = c$. Special case to include CI for components of $\beta$.
- Variance stabilizing transformation where relationship between $Var(y)$ and $E(y)$ is known.
- Box-Cox variance stabilizing transformation including detailed derivation of likelihood.
- Variable selection methods, F-tests, penalized likelihoods (AIC/BIC), nested vs non- nested comparisons, Mallow's $C_p$.
- Automated methods with small $p$: best subsets, stepwise approaches.
- Sparse linear regression approaches for big $p$ focussed on the LASSO to include a geometric interpretation of the penalty, likelihood contours, bias - variance trade off.
- Implementation in `glmnet` including using cross validation to choose the tuning parameter and final model selection.
- Generalised linear models (GLMs): motivation and assumptions
- Fitting GLMs, common GLM distributions.
- Parameter estimation, use of deviance in GLMs to test model fit.
- Model building (analysis of deviance), types of residuals, quasi likelihood.
- Binary response: likelihood, links, odds, odds ratios and logistic regression.
- Poisson regression for count data, using offsets to adjust for exposure.
- Two-way contingency tables, response & controlled variables, association and homogeneity, probability distributions for two-way tables.
- Using log-linear models when analysing two-way tables, MLEs.

#### Module Format

## Assessment

One formal 2 hour written examination. Format: 3 questions from 3.

## MAS369: Machine Learning

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS223 (Statistical Inference and Modelling) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

Machine learning lies at the interface between computer science and statistics. The aims of machine learning are to develop a set of tools for modelling and understanding complex data sets. It is an area developed recently in parallel between statistics and computer science. With the explosion of "Big Data", statistical machine learning has become important in many fields, such as marketing, finance and business, as well as in science. The module focuses on the problem of training models to learn from training data to classify new examples of data. Although other aspects of machine learning will be mentioned, the module focuses on the problem of classification; other topics in machine learning are covered by modules in Computer Science.

### Aims

- Introduce students to the main problems in machine learning
- Introduce students to some of the techniques used for solving problems in data science
- Introduce students to neural networks and the main ideas behind "deep learning"
- Introduce students to the principal computer packages involved in machine learning

### Outline syllabus

- The main problems of data science and machine learning
- Data sets and data visualisation
- Dimensionality reduction – principal components analysis and introduction to other methods
- Supervised learning: the classification problem and discriminant analysis
- Regression and classification trees
- Ensemble methods and random forests; boosting
- Support vector machines
- Neural networks and deep learning

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

**C** Everitt "An R and S-PLUS Companion to Multivariate Analysis" (Shelfmark 519.535, ISBN 1852338822)

### Assessment

Three projects of equal weight.

## MAS370: Sampling Theory and Design of Experiments

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS223 (Statistical Inference and Modelling); MAS367 (Linear and Generalised Linear Models) recommended |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

The results of sample surveys through opinion polls are commonplace in newspapers and on television. The objective of the Sampling Theory section of the module is to introduce several different methods for obtaining samples from finite populations. Experiments which aim to discover improved conditions are commonplace in industry, agriculture, etc. The purpose of experimental design is to maximise the information on what is of interest with the minimum use of resources. The aim of the Design section is to introduce some of the more important design concepts.

### Aims

- To consolidate some previous mathematical and statistical knowledge.
- To introduce statistical ideas used in sample surveys and the design of experiments.

### Outline syllabus

This course deals with two different areas where the important features are the planning before the data are collected, and the methods for maximising the information which will be obtained. The results of sample surveys through opinion polls, etc., are commonplace in newspapers and on television. The Sampling Theory component of the course introduces several different methods for obtaining samples from finite populations and considers which method is most appropriate for a given sampling problem. Experiments which aim to discover improved conditions are commonplace in industry, agriculture, etc. The purpose of experimental design is to maximise the information on what is of interest with the minimum use of resources. The Experimental Design component of the course introduces some of the more important design concepts.

### Assessment

Three assignments, each contributing 5% to the module mark. One formal 2 hour written examination contributing 85% to the module mark. Exam format: all questions compulsory.

## MAS371: Applied Probability

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS223 (Statistical Inference and Modelling); MAS275 (Probability Modelling) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

This unit will link probability modelling to statistics. It will explore a range of models that can be constructed for random phenomena that vary in time or space - the evolution of an animal population, for example, or the number of cancer cases in different regions of the country. It will illustrate how models are built and how they might be applied: how likelihood functions for a model may be derived and used to fit the model to data, and how the result may be used to assess model adequacy. Models examined will build on those studied in MAS275.

### Aims

- Illustrate the construction of probability models for random phenomena;
- Introduce some of the common classes of models for random phenomena;
- Illustrate how probability models may be fitted to data;
- Discuss applications of fitted models.

### Outline syllabus

- **Basic techniques**: likelihood functions and their properties and use.
- **Continuous time Markov chains**: Introduction; generator matrices; informal coverage of stationary distributions and convergence.
- **Inference for stochastic processes**: deriving likelihood functions for stochastic processes; fitting models to data; model criticism.
- **Applications of Markov chains**: birth-death processes; queues.
- **Point processes**: homogeneous and inhomogeneous Poisson processes, spatial and marked point processes, inference for point processes.

#### Module Format

### Assessment

One 2 hour written examination.

## MAS372: Time Series

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS223 (Statistical Inference and Modelling) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

## Description

Time series are observations made in time, for which the time aspect is potentially important for understanding and use. The course aims to give an introduction to modern methods of time series analysis and forecasting as applied in economics, engineering and the natural, medical and social sciences. The emphasis will be on practical techniques for data analysis, though appropriate stochastic models for time series will be introduced as necessary to give a firm basis for practical modelling. For the implementation of the methods the programming language R will be used.

## Aims

- To introduce methods to uncover structure in series of observations made through time.
- To illustrate how models for time series may be constructed and studied.
- To develop methods to analyse and forecast time series.
- To show how these methods are applied to data, and what kinds of conclusion are possible.

## Outline syllabus

- Examples of time series. Purposes of analysis. Components (trend, cycle, seasonal, irregular). Stationarity and autocorrelation.
- Approaches to time series analysis. Simple descriptive methods: smoothing, decomposition.
- Differencing. Autocorrelation. Probability models for stationary series. Autoregressive models.
- Moving average models. Partial autocorrelation. Invertibility. ARMA processes.
- ARIMA models for non-stationary series. Identification and fitting. Diagnostics. Ljung-Box statistic, introduction to forecasting.
- State space models. Filtering (Kalman filter), smoothing and forecasting.
- Trend and seasonal state space models, time-varying regression. Estimation of hyperparameters, error analysis.

**Module Format**

## Assessment

One formal 2 hour written examination. Format: 3 questions from 4.

## MAS377: Mathematical Biology

Semester: 1 10 credits

| | |
|---|---|
| Prerequisites: | MAS110 (Mathematics Core I); MAS111 (Mathematics Core II); MAS222 (Differential Equations) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

The course provides an introduction to the mathematical modelling of the dynamics of biological populations. The emphasis will be on deterministic models based on systems of differential equations that encode population birth and death rates. Examples will be drawn from a range of different dynamic biological populations, from the species level down to the dynamics of molecular populations within cells. Central to the course will be the dynamic consequences of feedback interactions within the populations. In cases where explicit solutions are not readily obtainable, techniques that give a qualitative picture of the model dynamics (including numerical simulation) will be used.

### Aims

To introduce students to the applications of mathematical techniques in deterministic models for the dynamics of biological populations.

### Outline syllabus

- **Population models:** Deterministic models; birth and death processes; logistic growth; competition between populations.
- **Epidemic models:** Compartment models; the SIR model.
- **Biochemical and Genetic Networks:** Mass-action kinetics; simple genetic circuits; genetic switches and clocks.

#### Module Format

## MAS441: Optics and Symplectic Geometry

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS211 (Advanced Calculus and Linear Algebra) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

Symplectic geometry is the most active area of modern differential geometry. This course is an introduction to some of the key ideas, for smooth submanifolds of $\mathbb{R}^k$. Certain spaces, such as the cotangent bundles of smooth manifolds and coadjoint orbits of matrix groups, are naturally equipped with symplectic structures and the course focuses on these classes of examples. The origins of symplectic methods lie in optics and the basics of this theory are included (no prior knowledge of optics is needed).

### Aims

- To provide an introduction to symplectic geometry, in the context of submanifolds of $\mathbb{R}^k$, motivated in part by ray optics.
- To provide a knowledge of symplectic linear algebra. This will be partly in terms of abstract vector spaces and partly in terms of $\mathbb{R}^n$. Background on vector spaces will be provided for those who have not studied the abstract theory before.
- To demonstrate the value of physical phenomena in understanding abstract theory in mathematics.

### Outline syllabus

- Examples of symplectic manifolds
- Vector spaces, duality and annihilators
- Symplectic vector spaces
- Light rays and lenses: Gaussian optics
- Smooth submanifolds of $\mathbb{R}^k$
- Symplectic manifolds and coadjoint orbits
- Lagrangian submanifolds, Leray index

#### Module Format

**C** Guillemin and Sternberg "Symplectic Techniques in Physics" (Shelfmark B530.15 (G), ISBN 0-521-38990-9)

### Assessment

One formal 2.5 hour written examination. Format: attempt all questions.

## MAS442: Galois Theory

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS333 (Fields) or MAS438 (Fields) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

Given a field $K$ (as studied in MAS333/438) one can consider the group $G$ of isomorphisms from $K$ to itself. In the cases of interest, this is a finite group, and there is a tight link (called the Galois correspondence) between the structure of $G$ and the subfields of $K$. If $K$ is generated over the rationals by the roots of a polynomial $f(x)$, then $G$ can be identified as a group of permutations of the set of roots. One can then use the Galois correspondence to help find formulae for the roots, generalising the standard formula for the roots of a quadratic. It turns out that this works whenever the degree of $f(x)$ is less than five. However, the fifth symmetric group lacks certain group-theoretic properties that lie behind these formulae, so there is no analogous method for solving arbitrary quintic equations. The aim of this course is to explain this theory, which is strikingly rich and elegant.

### Aims

- To explain the general theory of homomorphisms between fields.
- To explain the definition of Galois groups, and to compute them for cyclotomic extensions, and various extensions of small degree.
- To explain the Galois correspondence, and use it to reduce various questions in field theory to easier questions about finite groups.
- To study splitting fields and Galois theory for cubics and quartics, and to explain how they lead to algorithms for finding roots.

### Outline syllabus

- Review of fields and other background
- Homomorphisms and field extensions
- Splitting fields
- Extending homomorphisms; normal field extensions; Galois groups
- Examples involving extensions of small degree
- Cyclotomic fields and their Galois groups
- The Galois correspondence
- Cubics and quartics
- Extension by radicals and solvability

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 20 | Tutorials | 0 | Practicals | 0 |

### Recommended books

**B** Rotman "Galois Theory" (Shelfmark 512.81 (R), ISBN 0387985417)

**B** Stewart "Galois Theory" (Shelfmark 512.43 (S), ISBN 1584883936)

**C** King "Beyond the Quartic Equation" (Shelfmark 512.3 (K), ISBN 0817637761)

### Assessment

One formal 2.5 hour examination. Format: attempt all questions.

## MAS472: Computational Inference

Semester: 2 10 credits

| | |
|---|---|
| Prerequisites: | MAS364 (Bayesian Statistics) or MAS464 (Bayesian Statistics) |
| Corequisites: | |
| Cannot be taken with: | |
| Prerequisite for: | |

### Description

This unit aims to introduce the student to some of the powerful modern tools now available for statistical inference. The tools are largely based on the exploitation of modern computing power. They free the analyst from the distributional limitations of the past and they are widely applicable, both to traditional application areas of statistics and in new situations. The emphasis in the course will be on the practical utility of the methodology, though theoretical ideas will be introduced when necessary for understanding and use. Appropriate computer packages will be used to implement the methods.

### Aims

- To extend understanding of the practice of statistical inference.
- To familiarize the student with ideas, techniques and some uses of statistical simulation.
- To describe computational implementation of likelihood-based analyses.
- To introduce examples of modern computer-intensive statistical techniques.

### Outline syllabus

- Computational methods for likelihoods and likelihood theory.
- Simulation. Generating techniques. Monte Carlo integration and variance reduction.
- Bootstrapping.
- Simulation and Monte Carlo testing. Randomization tests.

#### Module Format

| | | | | | |
|---|---|---|---|---|---|
| Lectures | 16 | Tutorials | 0 | Practicals | 4 |

### Recommended books
