3 hours

*Attempt **ALL** the questions.*

*Each question in Section A carries 3 marks,
each question in Section B carries 8 marks.*

All solutions should be justified in full. Calculators should be relied upon for simple steps like basic arithmetic and plugging numbers into elementary functions.

Section A

A1 Let $f(x) = \frac{2x - 3}{2 - x} + 5$. State the domain of $f(x)$. Find $f^{-1}(x)$ and give the domain of $f^{-1}(x)$.

A2 Solve $4e^{2x+1} - e^2 = 0$ for x .

A3 Evaluate

$$\lim_{x \rightarrow 2} \frac{x^3 - 8}{x^2 - 4}$$

by using l'Hôpital's Rule or otherwise.

A4 Find the real and imaginary parts of

$$z = \frac{3 + i}{1 + 3i}.$$

- A5** For $y = \log_2 x$, find $\frac{dy}{dx}$.
- A6** Let $A = \begin{pmatrix} a & b \\ c & d \end{pmatrix}$. Write down its cofactor matrix (that is, a matrix made up of cofactors), adjoint matrix and inverse matrix.
- A7** Find the indefinite integral $\int \frac{dx}{\sqrt{1+x^2}}$ by the substitution $x = \sinh u$.
- A8** Find the indefinite integral $\int \frac{\ln x}{x} dx$ by using a suitable substitution.
- A9** Find the value of a such that the following system of equations has a nontrivial solution (that is, a solution other than $x = y = z = 0$).

$$\begin{cases} x - y + z = 0, \\ 3x + y - 4z = 0, \\ ax - y - 2z = 0. \end{cases}$$

- A10** For $f(x, y) = xy^2 \cosh(x^2y)$, find $\frac{\partial f}{\partial x}$ and $\frac{\partial f}{\partial y}$.
- A11** Let $A = \begin{pmatrix} 1 & -2 \\ 3 & 0 \end{pmatrix}$, $B = \begin{pmatrix} 4 & 4 \\ -1 & 1 \end{pmatrix}$. Find $A + 2B^T A$, where B^T denotes the transpose of matrix B .
- A12** Find the general solution of

$$\frac{dy}{dx} + \frac{y}{x} = x^3.$$

Section B

B1 Let $\mathbf{a} = (5t^2, t, -t^3)$, $\mathbf{b} = (\sin t, -\cos t, 0)$.

(i) Find $\mathbf{a} \times \mathbf{b}$.

(ii) Compute $\frac{d}{dt}(\mathbf{a} \times \mathbf{b})$.

B2 Let $A = \begin{pmatrix} 2 & -4 \\ -3 & 1 \end{pmatrix}$.

(i) Write down the characteristic equation and find all the eigenvalues of A .

(ii) Find the corresponding eigenvectors.

B3 Find the roots of the equation

$$z^3 - (2 + i)z^2 + z - (2 + i) = 0.$$

Hint: One solution is easier to spot than the others: try factorising the first two terms.

B4 Consider a function $y = f(x)$, which is defined by the following relation

$$y^x = x^y.$$

Taking logarithms of the both sides and differentiating, find an expression for $\frac{dy}{dx}$ in terms of x and y .

B5 Using basic row (or column) operations, show that

$$\begin{vmatrix} 1 & \cos x & \cos(x + y) \\ \cos x & 1 & \cos y \\ \cos(x + y) & \cos y & 1 \end{vmatrix} = 0,$$

for any real x and y .

Hint: You may start by noting $\cos(x + y) = \cos x \cos y - \sin x \sin y$.

B6 By using the Laplace transform, or otherwise, solve the following differential equation

$$\frac{dy}{dt} - 3y = e^{3t},$$

where $y = 1$ when $t = 0$.

B7 Answer the following two questions which are independent of each other.

(i) If $U(x, y) = \tan^{-1} \frac{y}{x}$, show that

$$\frac{\partial^2 U}{\partial x^2} + \frac{\partial^2 U}{\partial y^2} = 0$$

holds.

(ii) If $V(x, t) = \frac{1}{\sqrt{t}} \exp\left(\frac{x^2}{t}\right)$ for $t > 0$, show that

$$\frac{\partial V}{\partial t} = -\frac{1}{4} \frac{\partial^2 V}{\partial x^2}$$

holds.

B8 Consider the differential equation

$$a \frac{d^2 y}{dx^2} + b \frac{dy}{dx} + cy = 0,$$

where a, b, c are constants. The auxiliary equation $\phi(k) = 0$ has roots k_1 and k_2 , where $\phi(k) = ak^2 + bk + c$.

(i) Show that

$$a \frac{d^2 e^{kx}}{dx^2} + b \frac{de^{kx}}{dx} + ce^{kx} = \phi(k)e^{kx}. \quad (1)$$

Hence, show that $e^{k_1 x}$ and $e^{k_2 x}$ are two independent solutions, when $k_1 \neq k_2$.

(ii) By differentiating (1) *partially with respect to k* , that is, calculating $\frac{\partial}{\partial k}$ (1), show that

$$a \frac{d^2 (xe^{kx})}{dx^2} + b \frac{d(xe^{kx})}{dx} + c(xe^{kx}) = \{\phi'(k) + \phi(k)x\} e^{kx}. \quad (2)$$

(iii) For the case of repeated root $k_1 = k_2$, show how $\phi(k)$ takes a simplified form by writing it down explicitly. Hence show that the two independent solutions are given by $e^{k_1 x}$ and $xe^{k_1 x}$ using (1) and (2).
